Objective

I seek to become a technology leader in the IT field by honing my current skills as well as embracing new technologies and becoming proficient in a variety of technologies.

Skills Summary

Languages

- | | |
|--------------------|------------------|
| ? C/C++ | ? SQL |
| ? Java | ? Embedded SQL/C |
| ? Cold Fusion | ? HTML |
| ? JavaScript | ? FoxPro |
| ? Microsoft Access | ? Visual Basic |

? **Specializing in Object Oriented Programming / Design**

Operating Systems / Databases / Misc. Technology

- | | |
|--------------------------|---------------------|
| ? Windows (All Versions) | ? UNIX/Linux |
| ? Vitria's BusinessWare | ? Informix Database |
| ? SQL Server 2000 | ? CORBA |

Employment History

Self Employed

Atlanta, GA

Independent Contractor

July 2001 – Present

- ? I develop software according to my client's needs. Mostly I've been doing web development using Cold Fusion, JavaScript and HTML. Specializing in database connectivity.

Radiant Systems

Alpharetta, GA

Software Developer

May 2001 - July 2001

- ? Contract Position. Was a member of the International Team. Using the C++ language I added functionality to their API based on client requirements. The application was an Embedded Point of Sale application. While we developed under Windows 2000 the program ran under Windows CE.

Paysys International

Norcross, GA

Systems Developer

October 2000 - January 2001

- ? Was a member of the Platform team. The Platform team was tasked with supporting the company's C++ API used in their proprietary software. It was my job to fix defects and add features to the C++ API. This API was written in a very **Object Oriented** Programming style.

Andersen Consulting

Atlanta, GA

Programmer/Analyst

October 1998 - October 2000

- ? Made Major Enhancements to an existing Web Interface. The Database structure was further normalized resulting in the need to modify and enhance the web interface. This was done using Informix's Application Server called **Universal Web Connect** in combination with **Javascript**, **HTML** and some **Embedded SQL/C**

The database on the back end was Informix. Most pages were dynamically created. I later partially enhanced this system using **Cold Fusion** with an eye to replace Informix's UWC.

- ? Assisted in the creation of a web based Y2K Issues Tracking tool. The Web Interface was done using a combination of **Cold Fusion, Javascript, HTML** and **SQL**. An enhancement to this system was needed to interface with a more general issue tracking database. I wrote an interface in **C++** that downloaded a series of files containing Y2K issues extracted from this database. The interface processed these files which included data integrity checks and loaded the records into the local **Microsoft Access** database via **ODBC**. My interface then triggered a series of stored procedures to further process the data. I created these procedures because it was more efficient to launch the stored procedures that to work over **ODBC**.
- ? Wrote a **CORBA** client using **Iona's ORBIX** in C++. The client needed to access an object on another system which used VISI Broker. Because of this and due to the nature of the remote system, we required them to push an IOR file to our system via ftp each time their system was reset. My client loaded the IOR file and resolved a reference to an object which then contained a reference to the actual object needed.
- ? **Functioned as Bellsouth's Navigator Contract Administrator**. Using **Microsoft Access** and a series of scripts and functions managed all the contracts for Bellsouth. Also acted as the first stop for Navigator Support.
- ? On the Application Support Team I analyzed current business processes in preparation for the team to support part of the e-store application. This application was partially implemented using **Vitria's Businessware** and Java. I was chosen for this task because of my knowledge of BusinessWare and Java and my communication skills both oral and written.

Scientific Games Inc. Programmer/Analyst

Alpharetta, GA
June 1996 - October 1998

- ? Wrote programs in **C/C++** to verify that the programmer creating a game for a scratch off lottery ticket met the requirements for the game as specified in the working papers we each were given. Program generated reports which were used to analyze the game and were submitted to the Vice President for approval.
- ? Wrote utilities in **C++** that enhanced the system by automating tasks that were previously done manually. Also created my own personal libraries which resulting in a great improvement in speed and efficiency of my tasks.
- ? Wrote a couple of **Visual Basic** applications. These applications were simple utilities. I used Visual Basic to create the Graphical user Interface and I used **Microsoft's Visual C++** to create **dlls** which I called from the Visual Basic Application.

PC Consultants Programmer/Software Consultant

Berrien Springs, MI
1989 - May 1996

- ? Wrote various **C/C++** programs. While working here I was always given the total project so I was involved with the full life cycle of every project including support and documentation. I primarily worked under **DOS** and Windows environments. I've written text editors from scratch and I've even written a strategy game which was very complex and took me two years to do. There was much demand for **GUIs** as well as customized databases and so I specialized in those. I also did a project or two using **Visual Foxpro**. This job was part time until 1991 when it became full time for me.
- ? Consulted with clients to help them design and create infrastructures to enhance work flow. Many times this involved upgrading their systems to the latest and greatest but some times their system did not require a full overhaul.

Education

Andrews University

Berrien Springs, MI
