Undergraduate Programs

COMPUTING

Two emphases are available in Computing—Computer Science and Software Systems.

Computer Science focuses on a study of the computing as well as on its role in an application area. Areas of interest include artificial intelligence, compilers, computer architectures, computer graphics, computer networks, operating systems, program development, and analytical theory. A degree in computing with the Computer Science emphasis prepares students for graduate study, employment in computer systems/networks, administration/development, software development/maintenance, and for careers in education.

Software Systems is an applied study of computing, focusing on the development and maintenance of software in an application area. A minor in an application area is included as part of the degree. Typical minors might include one of the sciences, behavioral science, or business. Supervised “real-world” projects are a requirement for this degree. A degree in Computing with the Software Systems emphasis prepares students for employment in developing and maintaining commercial applications and for graduate studies in applied computing such as software engineering.

BS: Computing
Major requirements—40
Common core—15
CPTR125, 151, 152, 275, 461

Computer Science Emphasis
Required courses—12
CPTR425, 436 or 437, 462, 485 or 487
Cognate requirement—32-34
MATH141, 142, 281, 286, 355; STAT340 (20)
ELCT335 (4)
BIOL165; 166 (10)
or CHEM131, 132 (8)
or PHYS141, 142 (8)
or PHYS241, 242, 271, 272 (10)
or ELCT141, 142 (8)
Major electives—13
Chosen from CPTR courses in consultation with an advisor.
A minimum of 12 upper division credits required.

Software Systems Emphasis
Required courses—11
CPTR427, 460, 466; INFS428
Cognate requirements—32-34
MATH182, 215, 355; STAT340 (12)
Minor in an advisor-approved application area (20-22)
Major electives—14
Chosen from CPTR courses in consultation with an advisor.
A minimum of 12 upper division credits required.

Minor in Computing—20
Required courses—12
CPTR125, 151, 152, 275
Minor electives—8
Chosen from CPTR courses in consultation with an advisor.

Notes:
- No course grade below a C- may apply to a major or minor in Computing.
- A minimum GPA of 2.25 may apply to a major or minor in Computing.
- A secondary-education endorsement is available for students seeking either a major or minor in Computing. In such cases, CPTR459 must be taken. Consult the School of Education for further information.

ENGINEERING

INTEGRATED FOUR-YEAR PROFESSIONAL ENGINEERING PROGRAM

Andrews University offers the first two years of an integrated four-year professional engineering program. The final two years of the Bachelor of Science in Engineering degree program are offered at Walla Walla College (College Place, WA). Students may specialize in computer, civil, electrical, or mechanical
engineering. The department at Andrews University will assist students in coordinating a program with another engineering school upon request.

Professional Engineering
(First two years)
Suggested courses to be taken during the two years at Andrews—68

MA TH141, 142, 240, 281, 286; CHEM131,132; PHYS241, 242, 271,272; MECT121; ENGR120, 135, 225, 280; CPTR125 or 151; ENGL115; COMM104; Religion (6 credits); Social Studies and Humanities (3 credits); PE (1 credit).

ENGINEERING TECHNOLOGY
Engineering Technology—the area of the technological employment spectrum between the engineer and the skilled craftsman—includes both the engineering technician (2-year associate degree) and the engineering technologist (Bachelor of Science in Engineering Technology).

Individualized associate degree programs (AT) in engineering technology can be designed for students needing an associate degree.

BSET: Computer Engineering Technology
Major requirements—40
CPTR125 (meets BSET general education requirement), 151, 152, 461; ELCT235, 325, 335, 360; ENGT491, 492; plus 12 credits chosen from upper division CPTR and ELCT courses.

BSET: Mechatronics Engineering Technology
Major requirements—40
MECT122, 285, 355, 415; ELCT235, 307, 355; ENGT491, 492; plus 10 credits chosen from upper division ELCT and MECT courses.

Minor in Engineering Technology—20
A minimum of 20 credits chosen from ENGR, ELCT, INDT, and MECT courses in consultation with an engineering technology advisor.

Graduate Programs

MS: Software Engineering
Software Engineering is an applied study of computing focusing on the software development process through the application and synthesis of principles from computer science and related fields. Emphasis is placed on practical results balanced by scientific foundation. Supervised “real-world” projects are a requirement for this degree.

Admission requirements. In addition to meeting the general graduate admission requirements on pp. 39-41 of the bulletin, students applying for admission to the MS: Software Engineering program must show evidence that they have taken academic course work and/or demonstrate proficiency in the following areas:

Calculus
Computer Organization and Assembler
Discrete Mathematics
Elementary Data Structures
Probability or Statistics
Programming proficiency in two computer languages (including C or C++)

Degree requirements—32
A minimum of 32 semester credits. At least 18 credits chosen from 500- and 600-level graduate courses. The Comprehensive Examination must be successfully completed prior to graduation. Completion of the following requirements:

Foundation—0-6
CPTR427 and 460 are required unless previously taken at the undergraduate level.

Core courses—11
CPTR560, 561, 562, 637

Project or Thesis—6
Two projects (CPTR698) or a single thesis (CPTR699) is required. Thesis option if selected must involve software development.

Electives—9-15
a. Systems (Choose at least two)
CPTR461, 462, 550, 555, 556, 655, 625
b. General
Complete any acceptable 400-600 level CPTR; INFS428 courses chosen in consultation with an advisor.

MSA: Engineering Management Emphasis
See graduate programs for the School of Business.

Courses
(Credits)

COMPUTING AND SOFTWARE ENGINEERING

CPTR125 $ (3)
Introduction to Computer Programming
Programming in a selected language. May be repeated for a total of three unique languages. Satisfies general education requirements for computing majors. Only 3 credits of CPTR125 may apply toward a computing major or minor. Fall, Spring

CPTR151 $ (3)
Computer Science I
An introduction to programming methodology using C++, UNIX usage, problem-solving, algorithm development, control structures, arrays, program style, design correctness and documentation techniques, as well as a brief overview of computer systems and computer history. Fall, Spring

CPTR152 $ (3)
Computer Science II
A continuation of CPTR151 examines program specifications, design, coding, correctness, and style with additional coverage of pointers and arrays, and an in-depth study of recursion and data structures. Includes files, lists, stacks, queues, trees, graphs, and an overview of computer ethics. Prerequisites: CPTR151. Fall, Spring
CPTR275 $ (3)
**Computer Organization and Assembler**
Covers data representation, number base conversion, representation for integer fractions and floating numbers, Boolean algebra, truth table digital logic and circuit representations of basic computational building blocks, introduction to computer architecture; interrupt schemes; an introduction to system software including assemblers, loaders and linkers, and operating systems. Includes assembly language programming using a macro-assembler. Prerequisite: CPTR152. Spring

CPTR295 (1-3)
**Directed Computer Language Study**
Directed study of computer language in consultation with the instructor. Normally, the language is not included in other courses taught by the department. A programming project may be required. Prerequisites: CPTR151 or equivalent.

CPTR416 $ (3)
**Internet Technologies**
A study of current technologies and their effects, including web server software, e-commerce, various scripting languages, human-computer interfacing, perception, and related issues. Prerequisite: CPTR152. Spring, Summer

CPTR425 $ (3)
**Programming Languages**
Survey of current programming languages, including structure, runtime systems, the specification of syntax, and semantics. Definition of syntax for formal languages with emphasis on context-free languages. Techniques for scanning and parsing programming languages. Automated grammar analysis parsers. A major programming project is required. Prerequisite: CPTR275. Fall

CPTR427 $ (3)
**Object-Oriented Design and Programming**
Emphasizes the study of object-oriented analysis and design methodologies and the application of these to the development of advanced software. Includes survey of object-oriented programming languages and environments. A major programming project is required. Prerequisite: CPTR152. Fall

CPTR436 $ Alt (3)
**Numerical Methods and Analysis**
A study of common numerical techniques applicable on the computer. Includes interpolation, extrapolation, approximation techniques, numerical methods for linear problems, root finding, function fitting, numerical integration, location of extremes, efficiency of numerical algorithms, and minimization of computational error. Prerequisites: CPTR275 and MATH215 or 281. Spring (even years)

CPTR437 $ Alt (3)
**Formal Theory of Computation**
Includes post productions, Turing machines, and recursive functions. Recursive and recursively enumerable sets. Undecidability results of computation. Prerequisites: CPTR152 and MATH235, 281 or 355. Spring (odd years)

CPTR459 Alt (2)
**Secondary Methods: Computer Science**
Considers computer science programs in the secondary school and presents information and materials for teaching computer science in secondary school. Topics include organization and maintenance of equipment, publications, legal issues, dealing with diversity of abilities, problem-solving skills, and strategies for debugging programs. Prerequisite: CPTR275.

CPTR460 $ (3)
**Software Engineering**
Surveys basic software engineering topics associated with the processes, documents, and products of the entire software life cycle. Topics include software evolution, project organization, and management, feasibility studies, product definition, design, implementation, and testing issues, and the role of the software engineer within the life cycle. Prerequisite: CPTR152. Fall

CPTR461 $ (3)
**Operating Systems I**
Process management, including asynchronous concurrent processes and deadlock. Virtual storage management and job and process scheduling. Multiprocessing. Disk scheduling and file and database systems. Performance and security. Prerequisite: CPTR275 or CPTR152 and ELCT335. Fall

CPTR462 $ Alt (3)
**Operating Systems II**
Continuation of Operating Systems I with emphasis on comparing the design and implementation of different systems. A major project including contemporary operating system development is required. Prerequisite: CPTR461. Spring (even years)

CPTR466 (2)
**Software Engineering Group Project**
The implementation of a group project and the study of topics related to the group project, including CASE tools, 4GL's, and graphical user interfaces. Emphasizes written documents and oral presentations associated with group project rather than lecture. Corequisite: CPTR460. Fall

CPTR475 (1-4)
**Topics in _____________**
Selected topics of current interest in computer science such as Robotics, advanced languages, or others. Repeatable with different subjects.

CPTR485 $ Alt (3)
**Computer Graphics**
Introduction to computer graphics examining raster and/or vector images, 2D and 3D images, polygons, transformations, segments, widowing, clipping, hidden line removal. Prerequisite: CPTR152. Fall (odd years)

CPTR487 $ Alt (3)
**Artificial Intelligence**
Provides the conceptual basis for understanding current trends in Artificial Intelligence. Topics include both symbolic and numeric processing, intelligent search methods, problem representation, machine learning, expert systems, and a survey of some social implications of AI. Prerequisite: CPTR152. Fall (even years)

CPTR495 (1-3)
**Independent Study**
Directed study of material of special interest chosen in consultation with the instructor. No more than 6 credits may be earned in CPTR495. Graded S/U.

CPTR496 (1-3)
**Special Projects**
Project chosen in consultation with instructor. No more than 6 credits may be earned in CPTR495. Graded S/U.

**CPTR536  Compiler Construction**  
Storage allocation for programs, subroutine linkage, and code generation and optimization. Simple translator written in course. Prerequisites: CPTR275, 425. Spring (odd years)

**CPTR548  Advanced Database Design and Implementation**  
Database design and theory. Concurrency, distributed databases, integrity, security, query optimization. A survey of the design and implementation tradeoffs involved in using various available database packages. Includes a term project and reading from the literature. Prerequisite: CPTR275, INFS428. Fall (even years)

**CPTR550  Network Architecture**  
A study of the concepts and implementation of the client/server model of computing. Examines four implementations of the client/server model. Surveys the hardware and software used in network communications, including the specifications and protocols associated with thin and thick coax, twisted pair, fiber optics, slow IP mediums, UDP/IP and TCP/IP. Prerequisite: CPTR275.

**CPTR555  Advanced Operating Systems**  
May include system structures and algorithms, reliability, security, distributed systems, study of operating systems highlighting these concepts, and recently published research in these and other areas. Includes a term project and readings from the literature. Prerequisite: CPTR461. Spring (odd years)

**CPTR556  Real Time Systems**  
A survey of the system architecture and software engineering aspects of real time systems such as operating systems, and process-control software. Includes a term project and readings from current literature. Prerequisite: CPTR275.

**CPTR560  Advanced Software Engineering**  
A study of applied software product development issues, including requirement analysis, systems and software design methodologies, software-project planning models (e.g., COCOMO), implementation, testing and reuse, language, tool and hardware selection, software economics, productivity measurement, risk management, statistical process evaluation, and control. Prerequisites: CPTR460, MATH182 or 141, STAT285. Spring

**CPTR561, 562  Software Engineering Group Project I, II**  
The implementation of a group project and the study of topics related to the group project including CASE tools, 4GL's, graphical user interfaces. Generally, the project begun in CPTR561 carries over to CPTR562. Corequisites: CPTR460, 560 respectively. Fall, Spring

**CPTR565  Computer Architecture**  
Functional analysis of computer hardware and software systems including a comparative study of past, present, and proposed architecture as well as computer performance analysis and optimization. Prerequisite: CPTR275. Fall

**CPTR585  Advanced Computer Graphics**  
Advanced topics and current research in computer imaging—may include shading, ray tracing, radiosity, color spaces, lighting models, texture mapping, and recently published research in computer imagery. Includes term project and readings from the literature. Prerequisite: CPTR485. Spring (even years)

**CPTR587  Advanced Artificial Intelligence**  
Provides a forum for exploring current topics in machine intelligence through a survey of recent research results, independent readings, and hands-on projects. Typical topics include machine vision, speech recognition, natural language processing, and machine learning systems. Prerequisite: CPTR487. Spring (odd years)

**CPTR625  Analysis of Algorithms**  
Technique for analyzing and designing algorithms, including average/worst case analysis, asymptotics, empirical experimentation, intractability proofs (i.e., NP-Completeness) and heuristic alternatives. Application of such techniques as divide-and-conquer, graph, greedy, dynamic programming, backtracking, branch-and-bound, and probabilistic algorithms. Prerequisites: CPTR152, MATH281, 355, STAT340.

**CPTR637  Formal Methods**  
A survey of the different paradigms associated with formal methods. Applies formal methods to the specification, verification, and validation of software systems. Case studies are examined and a programming project is included. Prerequisites: CPTR460, MATH215 or 235, STAT285. Spring

**CPTR660  Thesis/Project Extension**  
(0)

**CPTR689  Topics in __________**  
Topics in computer science such as graphics, parallel processors, compiler design and optimization, communications and signal processing, distributed systems, graph theory, artificial intelligence, and formal theory. Repeatable with different topics to 6 credits. Prerequisite: Depends upon topic.

**CPTR690  Independent Study**  
(1-4)  
Directed study of material of special interest chosen in consultation with the instructor. May be repeated to 6 credits. Grade S/U.

**CPTR698  Master’s Research Project**  
(1-4)  
Special project chosen in consultation with student’s advisor and instructor. To be repeated to 6 credits. Grade S/U.

**CPTR699  Master’s Thesis**  
(1-6)  
To be repeated to 6 credits. Graded S/U.

**ELECTRONICS**

**ELCT141, 142  Basic Electronics**  
Study of AC and DC electric circuit theory, characteristics of diodes, transistors, and linear integrated circuits and their behavior
in simple circuits. Weekly: a 3-hour lab. Prerequisite for ELCT141: MATH166, 167. Prerequisite for ELCT142: ELCT141. Spring (ELCT141), Fall (ELCT142)

**ELCT235**

Digital Electronics
Binary numbers and codes, Boolean algebra, logic circuits, flipflops and registers, arithmetic circuits, counters, multiplexors, demultiplexors, design of state machines, and comparison of IC logic families. Weekly: a 3-hour lab. Prerequisite: ELCT142. Spring

**ELCT307**

Instrumentation and Process Control

**ELCT325**

Computing, Network Operations and Maintenance
Techniques and tools of computer and network operation and troubleshooting. Weekly: a 3-hour lab. Prerequisite: ELCT235. Spring

**ELCT328**

Printed Circuit Layout
Basic methods of layout and fabrication of single and double layer etched circuit boards. Weekly: a 3-hour lab. Prerequisite: ELCT235. Spring

**ELCT335**

Microprocessors
Introduction to computer organization, microprocessors, assembly language programming, memory devices, I/O devices, interfacing with emphasis on control applications. Weekly: a 3-hour lab. Prerequisite: ELCT235 or CPTR275. Fall

**ELCT350**

Programmable Logic Controllers
A study of relay logic. Application and programming of industrial programmable controllers to accomplish these relay logic functions. Weekly: a 3-hour lab. Prerequisite: ELCT235. Spring

**ELCT355**

Electrical Machinery and Controls
Characteristics and applications of DC motors and generators; transformers, AC motors and generators, motor starters and controls, power factor corrections, and speed controls. Weekly: a 3-hour lab. Prerequisite: ELCT307. Spring

**ELCT360**

Communication Systems and Electronics
Filters, oscillators, frequency response plots, tuned circuits, impedance matching, and Fourier series. Amplitude, frequency, phase, and pulse modulation. Weekly: a 3-hour lab. Prerequisite: ENGT310. Spring

**ELCT365**

Transmission Systems
Signal transmission via wire, coaxial cable, waveguide, antenna, and optical fiber media. Attenuation and distortion effects. System power budget. Prerequisite: ELCT360. Spring

**ELCT380**

Amplifier and Wave-Shaping Circuits
Linear amplifiers with an emphasis on op-amp circuits and their amplitude and frequency limitations. Includes linear waveform shaping, clipping, clamping, gating, switching, and comparator circuits. Weekly: a 3-hour lab. Prerequisite: ENGT310. Fall

**ELCT420**

Avionics Principles and Systems
A study of operating principles and circuits of communication and navigation equipment used in general aviation. Prerequisites: ELCT335, 360. 380. May not be offered each year. Fall

**ELCT439**

Embedded Systems
Microprocessor interfacing and applications in the area of process monitoring and control. Use of BASIC or C++. Weekly: a 3-hour lab. Prerequisite: ELCT335 and CPTR152. Spring

**ENGINEERING**

**ENGR120**

Introduction to Engineering
Explores specialized areas and job functions of engineers and technologists. A design project emphasizes the engineering design process. Introduces Mathcad. Fall

**ENGR135**

Descriptive Geometry
Solution of basic space problems. Determination of distances and angles, intersections of lines and surfaces, intersections of lines and development of surfaces. Prerequisite: MECT121. Spring

**ENGR224**

Engineering Materials
Study of the science of engineering materials. Engineering properties are correlated with internal structure and service environment. Weekly: a 3-hour lab. Prerequisite: CHEM131. Spring

**ENGR225**

Circuit Analysis
Resistive circuit analysis, network theorems, dependent sources, energy storage elements, 1st and 2nd order circuit transient responses, ac circuit analysis using phasors and impedances, and ac complex power. Weekly: a 3-hour lab. Prerequisite: MATH142. Spring

**ENGR248**

Workshop
Provides flexibility for the occasional workshop where it is appropriate to offer engineering credit. Workshop requirements must be approved by the department.

**ENGR280**

Engineering Mechanics
Principles of statics and their application to engineering problems; forces, moments, couples, friction, centroids, and moments of inertia. Vectorial kinematics of moving bodies in fixed and moving reference frames. Kinetics of particles, assemblies of particles, and rigid bodies, with emphasis on the concept of momentum. Keplerian motion, elementary vibrations, and conservative dynamic systems. Prerequisite: MATH142. Fall

**ENGR370**

Technical World and Man
Gives students a general understanding of how modern technologies affect society. Topics include how humans respond to technological change, the social consequences of technology, and technological issues in national decisions. Spring
### ENGR465

**Operations Analysis and Modeling**

The methodology of mathematical modeling and its relation to solving problems in industrial and public systems. Linear programming, scheduling, queuing, simulation, optimization, and decision analysis. Prerequisites: INDT460, STAT340. May not be offered each year. *Spring*

### ENGINEERING MANAGEMENT

#### ENGM520

**Ergonomics and Work Design**

The application of ergonomics and engineering principles to the design analysis and measurement of human work systems. *Summer*

#### ENGM555

**Facilities Planning**

Planning and design of industrial and service facilities: site selection, process layout, materials handling, and storage. *Summer*

#### ENGM565

**Operations Analysis and Modeling**

The development and use of mathematical models to analyze elements of production and service systems: linear programming, probabilistic models, game theory, dynamic programing, queuing theory, and simulation. Prerequisites: INDT460; STAT285; MATH142 or 182. *Spring*

#### ENGM570

**Project Management**

Design and management of engineering projects: proposals, planning, resource requirements, organization, scheduling, and cost and schedule control. *Fall*

#### ENGM690

**Independent Study**

Individual study of research in some area of engineering management under the direction of a member of the engineering faculty. *1–4 credits*

#### ENGM698

**Research**

Research methods and a research project in an area of engineering management. *2 credits*

### INDUSTRIAL TECHNOLOGY

#### INDT310

**Industrial Supervision**

Introduction to and overview of the fundamentals of industrial supervision. Topics include organization, duties, human relations, training, evaluation, promotion, grievances, management-employee relationships. *Spring*

#### INDT315

**Succeeding in the Workplace**

Focus on the development of attitudes, performance, and communication that will assist in making the transition from the classroom to the workplace an enjoyable and profitable experience. *Fall*

#### INDT320

**Work Methods and Measurements**

Principles and applications of basic methods and techniques for improvement of the man-job-time relationships; job standards, time and motion studies, and work-space design for efficient use of manpower. *Spring*

#### INDT410

**Project Management**

Methodology used successfully to carry out a technical project including proposals, planning, work breakdown, scheduling, creativity, monitoring progress, and documentation. *Fall*

#### INDT440

**Quality Control**

Analysis of the factors affecting product quality during manufacturing. Topics include basic statistics, sampling, control charts, measurements methods, inspection systems, reliability, and motivation programs. If this course is taken to fulfill degree requirements at the undergraduate level, it cannot also be taken at the graduate level to fulfill degree requirements for a graduate degree. Prerequisite: STAT285 or 340. *Spring*

#### INDT450

**Industrial Economy**

Study of engineering decision methodology and criteria used to include economic factors in determining the best alternative in the design and selection of equipment, structures, methods, and processes. *Spring*

#### INDT460

**Production Planning and Control**

Planning and coordination of manufacturing facilities and
materials for economic production: forecasting, estimating, process planning, plant layout, product flow, scheduling, production controls, materials acquisition and handling, and inventory. If this course is taken to fulfill degree requirements at the undergraduate level, it cannot also be taken at the graduate level to fulfill degree requirements for a graduate degree. Prerequisites: MATH166 or equivalent, STAT285 or 340. Fall

MECHANICAL TECHNOLOGY

MECT120 $ (3)
Computer-Aided Drawing
An introduction to the use of AutoCad, graphics generation and editing, file maintenance, plotting, and 2- and 3-dimensional drawings. Weekly: a 3-hour lab. Credit may not be earned in MECT120 and MECT121. Fall

MECT121 $ (2)
Mechanical Drawing I
Fundamentals of drawing as applied to mechanical engineering problems. Orthographic projections, auxiliary and sectional views, dimensioning, oblique and isometric views. Sketching and computer-aided drafting. Weekly: a 3-hour lab. Fall

MECT122 $ (3)
Mechanical Drawing II
Limit dimensioning, drawing, and interpretation of weld symbols. Solid modeling and production drawings using CAD. Weekly: a 3-hour lab. Prerequisite: MECT121. Spring

MECT235 $ (4)
Materials Technology
Study of industrial materials. Properties of materials correlated with the internal structure. Includes metals, plastics, and ceramics. Weekly: a 3-hour lab. Prerequisites: MATH166, CHEM131. Spring

MECT285 (4)
Statics and Strength of Materials
Analysis of static force systems. Forces, moments, resultants, free-body diagrams, equilibrium, center of mass, moment of inertia, and friction. Assignments designed to develop problem-solving abilities. Study of internal stress and deformation of elastic bodies. A minimum grade of C required in order to enroll in MECT355. Prerequisite: MATH182. Fall

MECT326 $ Alt (4)
Fluid Power Systems
Principles and applications of fluid power systems to actuate and/or control machines. Electro-hydraulic-pneumatic systems studied. Principles of fluids introduced. Weekly: a 3-hour lab. Prerequisite: MECT285. Fall

MECT355 (4)
Dynamics and Kinematics
Fundamentals and applications of dynamics; displacement, velocities, acceleration, work, energy, power impulse, momentum, and impact. Also a study of the basic theories and techniques in the analysis of relative motion, acceleration, and acceleration of machine parts such as linkages, cams, gears, and other mechanisms. Prerequisites: MATH182, MECT285. Fall

MECT370 Alt (4)
Heat Power
Thermodynamics properties, first and second law of thermodynamics, ideal gas law, the Carnot Cycle, power and refrigeration cycles, heat transfer power and refrigeration cycles, non-flow gas processes, mixtures of ideal gasses, psychrometric chart, air conditioning, fluid statics, kinematics, dynamics. Weekly: a 3-hour lab. Prerequisite: MECT355. Fall

MECT375 Alt (4)
Fluid Mechanics
Dimensionless parameters, compressible flow, flow-in pipes, open channel flow, drag, lift. Weekly: a 3-hour lab. Prerequisite: MECT355. Spring

MECT415 (3)
Mechanical Design and Fabrication
The design of machine elements and the calculations necessary in determining the size and shape of machine parts. The selection of materials and the application of standard machine components. Includes bearings, gears, clutches, and couplings. Prerequisite: MECT355. Spring
