

# Project Outline

Use the following outline with the [Teacher Logbook](#), PowerPoint lessons, and teaching notes (*available on our website in the Teaching Guides section of the Teacher Resources*) to guide your students through the invention project. This outline will help you create a schedule while giving you the flexibility to adapt the project for your class. The outline and Teacher Logbook include links to many of the handouts you will need. If you view the outline or the Teacher Logbook on a computer, you can click the links to quickly access these resources. We have also provided Assessment Rubrics to help you evaluate your students' performance. You can find these and more (worksheets, activities, examples, etc.) on our website in the [Teacher Resources](#).

We recommend working on the project at least once a week, but you will likely need additional time when the students are designing, building, testing, and improving their prototype. In total, the project will take at least 12 days of in-class time. If some topics take less time than expected, feel free to go faster or combine days to leave extra time for project revision.

At the end of the project, organize a school invention fair with judges to evaluate each project. The winning team(s) from this event will be eligible to enter Mission: Invent, an NAD-wide invention fair. Here they will present their inventions and engage with students from across North America. For more details about organizing a local invention fair, refer to the Invention Fair Guidelines and [Judging Rubric](#) (*available in the Invention Fair section of the Teacher Resources*).

In addition to the STEM topics, we have included a Biblical Connection with this project. Each team will select a Bible story, character, or lesson that relates to their invention. Encourage your students to start thinking about this early and give frequent examples, such as short devotional thoughts at the beginning of each class (*devotional and character examples available in the Biblical Connection section of the Teacher Resources*).
