We live in a confused, hurting world, filled with strife, fear, and conflicting opinions. Where is our safety? "The grass withers, and the flower fades, but the Word of our God shall stand forever" (Isaiah 40:8). Our safety is in what God says, and in the Lord Himself (see Psalm 46:1).

This morning, at 6:00 am Eastern Standard Time, our press release entitled, "Japan's Disaster: Another Apocalyptic Sign of the End of Days, or Not?" went live to thousands of national radio, TV, and print media. Response was immediate.

At 8:15 AM I was interviewed on The Wiley Drake Show in New York.
At 10:30 AM I was interviewed on The Raffaele Report in Pennsylvania.
At 11:30 AM I was interviewed by Charisma Magazine.

During every interview I sensed the Holy Spirit working. In the wake of the Sumatra, Katrina, Haiti, Australia and New Zealand disasters, plus bird and fish deaths, plus Middle East uprisings, believe me, the public is deeply stirred. What do these things mean? millions wonder. Only the Word of God has the full answer.

During my interview on The Wiley Drake Show, pastor Drake unexpectedly mentioned on air that he just ordered his iodine. What's this about? Perhaps you aren't aware of it, but there is huge interest right now in America in protecting the body from possible future radiation fallout from Japan (should it finally cross the seas), and as a result, the public is now scrambling for iodine supplements to protect the thyroid gland from possible radiation cancer (read this article in the Oregonian). Like I said, even Pastor Drake said he had just ordered his iodine. Most sources are all sold out.
months White Horse Media has been in ongoing discussions with Dr. Rob McLintock, founder of Healing Leaves nutritional supplements. Many years ago, Dr. Rob (with God's help) healed himself completely of Multiple Sclerosis with natural foods. Based on years of research, Dr. Rob has personally developed his own unique line of natural food health products that really work. One of his best supplements is his original Super Green Phyto Complex (a nutritional drink) loaded with vitamins, minerals, enzymes and amino acids from Aloe Vera, Spirulina, Chlorella, wheat grass, barley grass, kelp, alfalfa, broccoli, grape seed, and many other "super foods" that greatly benefit the body. Dr. Rob told me today that yes, his Super Green Phyto Complex has iodine too. Not only that, it tastes good!

On March 6, our White Horse Media Board of Directors fully approved the addition of Dr. Rob McLintock's natural health supplements to our product line. If you wish to purchase Dr. Rob's Super Green Phyto Complex, you can now order 2 lbs for $54.95 (a very good price) directly from White Horse Media. Call 1-800-782-4253. White Horse Media is now creating a website specifically for Healing Leaves products (coming soon). If you wish to read more about Dr. Rob's story, or his powerful products, visit www.healingleaves.com.

White Horse Media (which seeks to save human souls by pointing sinners to Jesus Christ) takes its name from Revelation 19:11 (behold a white horse...), and Healing Leaves (which seeks to strengthen human bodies through natural products that God has created) takes its name from Revelation 22:2 ("the leaves of the tree were for the healing of the nations"). We think this is a perfect fit!

May Jesus save our souls, and keep us healthy too,

Sincerely in Him,

Steve Wohlberg  
Speaker/Director, White Horse Media

Japan's Disaster: Another Apocalyptic 'Sign of the End of Days,' or Not?

Contact: Steve Wohlberg, White Horse Media, 559-977-9744, steve@whitehorsemedia.com

MEDIA ADVISORY, March 16, 2011 /Christian Newswire/ -- As Japan reels from a quake 8,000 times stronger than last month's seismic shock in New Zealand, and as crippled nuclear reactors ignite nightmarish global concerns of radiation poisoning, even secular media is using phrases like "of biblical proportions."

Is this true?

Sumatra 9.1, Katrina, Rita, massive flooding in Australia, birds and fish dying around the world, bees disappearing, Middle East uprisings, and now Japan's killer quake.

What on earth is going on?

"There shall be signs," predicted Jesus Christ ominously, "and great earthquakes in various places ... the sea and the waves roaring; men's hearts failing them for fear and for the expectation of those things that are coming upon the earth" (see Luke 21:11,25,26).

Does such an idea reflect merely the hardhearted ravings of religious fanatics bent on making a buck from humanity's misery, or is it possible that planet Earth is indeed approaching the biblical "end of days"?

Widely quoted by media as an apocalyptic expert, Steve Wohlberg is once again ready to share his views. Speaker/Director of White Horse Media, Mr. Wohlberg has been interviewed on over 500 radio and TV shows, has been featured on three History Channel documentaries (Nostradamus Effect: Secret of the Seven Seals, Armageddon Battle Plan, Strange Rituals), was recently quoted in The New York Daily News, and has spoken by special invitation inside the Pentagon and U.S. Senate. He is also the author of 25 books, including Surviving Toxic Terrorism (Remnant Publications, 2010) and his blockbuster, End Time Delusions (Destiny Image, 2004).

To schedule an interview, contact Mr. Wohlberg directly:

Mobile: (559) 977-9744.

"Steve, It was so wonderful to have you! Our phone lines were jammed the whole time, so I know you struck an important chord with listeners ... We would welcome you back anytime, so please keep in touch!" Janet Mefferd, The Janet Mefferd Show, Salem Radio Network

"My interview with Steve Wohlberg was a delight. He was well informed, passionate, and articulate." Inga Barks, The Inga Barks Show, KMJ, 580 AM
Oregonians panic, rush stores for iodine as nuclear meltdown looms in Japan

by Gordon Grearson
Oregon Herald staff reporter
Saturday March 12, 2011  5:38 PM

As the possibility of a nuclear core meltdown in Japan turns from possible to what some are now calling "a probability", many people are beginning to panic, including Oregonians.

Supermarkets, Pharmacies, and Drug Stores are reporting a huge rush of customers asking to buy iodine tablets in the form of Potassium Iodide as an anti-radiation cure. Safeway, Rite Aid, Fred Meyer, major drug stores, and pharmacies report an insurgent and perhaps an unnecessary demand for iodine.

Westerly winds from Japan move over the pacific to Oregon. The fear of course is that a core meltdown will carry radioactive particles here Japan. In the case of a meltdown, we'd need to closely observe upper-level winds. The the jet-stream could move radiation to the West Coast in only a few days.

Washington Health Department spokesman Gordon MacCracken said today that even in the event of a large release from the reactor, radiation would be diluted before reaching Oregon and radiation levels would be so low that there may be no need special concern.

Dr. Mel Kohn, Oregon's Director of Public Health, says there have been no detected increased radiation levels detected at this time and he does not expect there to be an increase in the near future. "Given the current size of the release and the distance from Oregon, we do not expect that to change", said Kohn. "There is no public health risk to the state."

Today, Oregon Public Health Director Mel Kohn, M.D., said, "The Oregon Public Health Emergency Preparedness Program and the Radiation Protection Services are closely monitoring information on the radiation release reported in Japan after an explosion at a reactor site Saturday."

The Chernobyl reactor was not housed in a sealed container as is the reactor in Japan.

Nevertheless, store clerks and pharmacists on Oregon say they have attempted to inform panicking customers they cannot sell the kind of iodine they would need, that iodized salt would help but they'd probably take too much of the salt and that could be disastrous as well.

One pharmacist who did not want us to mention the name of his store, said a customer became extremely angry when he couldn't find iodine tablets and began kicking boxes and tearing up the place. He left after the assistant store manager threatened to call police.

Another merchant reported a customer threatened to take his business elsewhere and stormed out of the store when he could not find iodine tablets.

The demand is for Potassium Iodide, in the form of an anti-radiation pill or tablet. Others are stocking up on survival equipment from stores such as Home Depot. News reports are pouring in about the disaster in Japan and the possible or currently in effect core meltdown. People are talking, many panicking, calling their doctor, and becoming frustrated when they cannot reach a health official.

There is much misunderstanding about iodine tablets. The assumed solution is that if your body is low on iodine, saturating with a source of stable iodide prior to exposure can help stop the absorption of deadly radioactive iodine.
If the body does not need iodine, it will take in less radioactive iodine.

Potassium iodide, taken orally before or even after exposure, may help protect the thyroid from ingested radioactive iodine from exposure levels, which could drift over the Pacific and reach Oregon. It could help to prevent thyroid cancer. OSU councilors when called suggest not to panic at this time.

Even multivitamins can help if you don't have access to potassium iodide supplement. Radioactive cesium and iodine, if released in significant quantities into the environment, can replace non-radioactive potassium and iodine in the body. An Oregon State Health coordinator, Richard Johnson said, "I want to emphasize that there's no reason to think at this time that this will become another Chernobyl. We've come a long way since then and there are world experts at play, working to cool the core. Panic only makes us think less logically."

When asked about iodine, he offered, "Adults over 40 should not take Potassium iodide unless public health officials say that contamination with a very large dose of radioactive iodine is expected."

Other are thinking about the workers at the nuclear plants in Japan, and the residents within a hundred or so miles from them. The workers risking their lives and health to save others.

A single dose of Potassium iodide protects the thyroid gland for a day or so. A one-time dose at the levels recommended is usually all that is needed to protect the thyroid gland. In some cases, radioactive iodine might be in the environment for more than 24 hours. If that happens, local emergency management or public health officials may tell you to take one dose of Potassium iodide every 24 hours for a few days. You should do this only on the advice of emergency management officials, public health officials, or your doctor.

No one has yet conclusively assessed this question 25 years after the Chernobyl Accident," said John Williams, professor of nuclear and energy engineering at the University of Arizona.

The acceptable level of radiation exposure, up to 10 microsieverts per year, is based on a "no threshold" model, which assumes a direct relationship between radiation dose and cancer risk and implies anything beyond natural levels is harmful. But some experts argue that low-level radiation may be less harmful on a per unit basis.

Jacky Williams, director and core leader of the Center for Biophysical Assessment and Risk Management Following Irradiation at the University of Rochester Medical Center, called the 20-kilometer evacuation radius an "extremely conservative safety zone to protect against fallout."

The radiation dose following the Hiroshima and Nagasaki bombings was cut in half every 200 meters from ground zero, Williams said.

But the fallout from a Fukushima could vary greatly depending on the nature of any leak -- whether it's through an explosion of the core, as in Chernobyl, or a slow, controlled release of pressure-building gases -- and the wind.
