

# INTERNATIONAL AGRICULTURE DEVELOPMENT

Travel the World Helping Developing Countries Through Food Security & Sustainability

## Why is a degree in International Agriculture Development right for you?

The International Agriculture Development degree is a unique partnership with the Andrews International Development Program. The degree has been built to provide students with broad experiences in agriculture, food systems, horticulture, business management, environmental leadership, social development / policy and more to blend needed skills in helping developing countries. Additionally, the program offers the ability to fast track to a one-year masters degree in International Development after graduation, if such experience is something you're looking for.

NGO's, non-profits and governmental agencies are all looking for skilled young leaders to manage programming (domestically and overseas), do research and create assistants plans in the developing parts of our world. With food inequity, environmental changes and advancing technology the demand for people to fill these unique rolls couldn't be greater. If you like to travel, want a professional degree and enjoy some time outside maybe this degree is for you.

## BACHELORS OF TECHNOLOGY – 124
