## BIOCHEMISTRY
What can I do with this major?

### AREAS

- **RESEARCH**
  - Basic Research
  - Applied Research
  - Grant Writing
  - Administration

- **Some areas of specialization:**
  - Healthcare: virology, immunology, enzymology
  - Pharmacology: drug properties, interactions, application and development
  - Environmental: testing, air/water/waste management, regulation
  - Agricultural: crop production, herbicide/pesticide development and application
  - Food science: preservation, nutrition
  - Cosmeceutical: development and application
  - Forensic: toxicology, DNA analysis, scientific instrumentation

### EMPLOYERS

- University laboratories
- Federal government laboratories/agencies:
  - National Science Foundation
  - National Institutes of Health
  - Food and Drug Administration
  - Environmental Protection Agency
  - Department of Agriculture
  - Department of Energy
  - Armed Services
- State and local government laboratories/agencies
- Public health departments
- Hospital laboratories
- Commercial medical laboratories
- Private testing laboratories including forensics
- Independent research foundations

- Industries:
  - Pharmaceutical
  - Biotechnology
  - Food processing
  - Cosmetic
  - Chemical
  - Petroleum
  - Agricultural

### STRATEGIES

- Bachelor's degree in biochemistry, biology, or chemistry qualifies one for laboratory technician or research assistant positions.
- Choose courses with laboratory components to build experimental and instrumentation skills.
- Gain experience in area of interest through internships, research with professors and/or complete a senior research project.
- Complete a certificate training program, usually one year, to learn specialized laboratory techniques.
- Take a course in grant writing.
- Earn master's degree in biochemistry for advanced positions, greater responsibility, and higher pay.
- Obtain Ph.D. to direct research projects and lead research teams.

### TEACHING

- **Elementary**
- **Secondary**
- **Post-secondary**
- **Non-classroom settings**

- Public and private schools, K-12
- Two-year community colleges/technical institutes
- Four-year institutions
- Professional schools including colleges of pharmacy, dentistry, medicine, veterinary medicine, and agriculture
- Museums
- Zoos
- Nature centers and parks

- Develop excellent communication skills.
- Volunteer with and/or tutor target age group.
- Complete an accredited education program for certification/licensure in biology and/or chemistry.
- Earn a master's degree for teaching at some two-year institutions.
- Prepare to attend graduate school by maintaining a high grade point average and securing strong faculty recommendations.
- Complete Ph.D. for college or university teaching.

## OTHER PROFESSIONAL OPPORTUNITIES

| Sales/Marketing                     | Biotechnology industry                        | Supplement biochemistry degree with coursework in chosen field.            |
| Technical Writing                   | Pharmaceutical and chemical companies         | Gain sales experience through internships, part-time work, or summer jobs for sales positions. |
| Scientific Journalism               | Publishers:                                    | Take business and/or computer classes.                                     |
| Scientific Illustration             | Textbook, magazine, newspaper, book           | Become familiar with desktop publishing and other software packages.      |
| Regulatory Affairs                  | Software firms                                 | Develop strong written and oral communication skills.                     |
| Administration/Management           | Regulatory agencies                            |                                                                           |
| Scientific/Technical Recruiting     | Search firms                                   |                                                                           |
| Intellectual Property/Patent Law    | Law firms                                      |                                                                           |
| Bioinformatics                      | Legal departments of corporations              |                                                                           |

Plan on attending medical school or other related graduate program. Maintain an outstanding grade point average, particularly in the sciences. Meet with a pre-health advisor periodically. Join related student organizations. Demonstrate leadership abilities. Volunteer to work in a hospital or healthcare setting. Find a summer job or internship in a hospital. Secure strong faculty recommendations. Research all of the various fields within medicine to determine a particular career goal. Develop a back up plan in case medical/graduate school admission is denied.

Supplement biochemistry degree with coursework in chosen field.
Gain sales experience through internships, part-time work, or summer jobs for sales positions.
Take business and/or computer classes.
Become familiar with desktop publishing and other software packages.
Develop strong written and oral communication skills.
Get experience writing for a school or local newspaper.
Obtain an MBA or Ph.D. to reach high levels of administration.
To pursue a J.D., participate in mock trial and pre-law associations, learn law school admissions process.
GENERAL INFORMATION

- Biochemists are typically curious and creative with strong observational skills and the ability to persevere.
- Biochemists often interact with scientists from other disciplines. Learn to work independently and as part of a team.
- Develop the ability to communicate clearly to compile and share results in oral and written forms.
- Gain competencies in computers and mathematics.
- Read scientific journals to stay current on relevant issues in the field, and join related professional organizations to network and build contacts.
- As an undergraduate, seek laboratory experiences such as research projects, volunteering with professors, summer jobs, or internships.
- Visit government laboratories or research centers to learn more about opportunities in biochemistry. Schedule informational interviews to learn about the profession and specific career paths.
- Participate in research programs sponsored by organizations like the National Science Foundation and the National Institutes of Health.
- Consider a certificate program or specialized master's program to qualify for research technician positions.
- Become familiar with the specific entrance exam for graduate or professional schools in your area of interest.
- Maintain a high grade point average, and secure strong faculty recommendations.
- Earn master's degree for greater variety and autonomy on the job.
- Earn Ph.D. to work on high-level research projects, to direct research programs, to enter high levels of administration, and to teach at four-year post-secondary institutions. Postdoctoral fellowships may also be required.
- Combine an undergraduate degree in biochemistry with a degree in law, computer programming, business, education, information science, or other discipline to expand career opportunities.
- Learn the job application process for government positions.
