## **Extra Practice** 6.5

In Exercises 1–3, use  $\log_5 3 \approx 0.683$  and  $\log_5 6 \approx 1.113$  to evaluate the logarithm.

**1.** 
$$\log_5 81$$
 **2.**  $\log_5 \frac{1}{6}$  **3.**  $\log_5 \frac{1}{2}$ 

## In Exercises 4-6, expand the logarithmic expression.

- **5.**  $\log_6 \frac{5x^2}{v^3}$ 6.  $\log_8 6 \sqrt{xy}$ **4.**  $\log_3 12x^7$
- 7. Describe and correct the error in expanding the logarithmic expression.

$$\int \ln \sqrt[3]{xy} = \frac{1}{3} \ln x + \ln y$$

**10.**  $2 \ln 4 + 5 \ln x + 3 \ln y$ 

- In Exercises 8–11, condense the logarithmic expression.
  - **9.**  $\log_8 5 + \frac{1}{4} \log_8 x$ 8.  $5 \log_9 x - \log_9 4$ **11.**  $\log_6 9 + 2 \log_6 \frac{1}{3} - 3 \log_6 x$

## In Exercises 12–14, use the change-of-base formula to evaluate the logarithm.

- **14.**  $\log_4 \frac{8}{17}$ **13.** log<sub>3</sub> 30 **12.**  $\log_{8} 15$
- **15.** Your friend claims you can use the change-of-base formula to write the expression  $\frac{\ln y}{\ln 3}$  as a logarithm with base 3. Is your friend correct? Explain your reasoning.
- **16.** For a sound with intensity I (in watts per square meter), the loudness L(I) of the sound (in decibels) is given by the function  $L(I) = 10 \log \frac{I}{L_0}$ , where  $I_0$  is the intensity of a barely audible sound (about  $10^{-12}$  watts per square meter). The bass guitar player in a band turns up the volume of the speaker so that the intensity of the sound triples. By how many decibels does the loudness increase?
