## Force

- A $\qquad$ or a $\qquad$
- Is a $\qquad$
- Unit: $\qquad$ (N)
- Measured by a $\qquad$

## Newton's First Law of Motion

A body at $\qquad$ remains at $\qquad$ or, if in motion, remains in $\qquad$ at a $\qquad$ unless acted on by a net external $\qquad$ —.

## Inertia

- Property of objects to remain in $\qquad$ motion or rest.
- $\qquad$ is a measure of inertia

## Newton's Second Law of Motion

Acceleration of a system is directly proportional to and in the same $\qquad$ of as the net $\qquad$ and
inversely proportional to the $\qquad$ _.

$$
a=\frac{F_{n e t}}{m} \text { or } F_{n e t}=m a
$$

## Newton's Third Law of Motion

Whenever one body exerts a $\qquad$ on a second body, the first body experiences a force that is equal in and opposite in $\qquad$ to the force that it exerts.
Every force has an equal and opposite reaction force.

A football player named Al is blocking a player on the other team named Bob . Al applies a 1500 N force on Bob. If Bob's mass is 100 kg , what is his acceleration?

What is the size of the force on Al ?

If Al's mass is 75 kg , what is his acceleration?

A 0.046 kg golf ball hit by a driver can accelerate from rest to $67 \mathrm{~m} / \mathrm{s}$ in 1 ms while the driver is in contact with the ball. How much average force does the golf ball experience?

1. Forces are vectors. Look back in previous lessons and explain how to add vectors.
2. You are riding in a car when it turns to the left abruptly. Why do you feel like you are being forced to the right?
3. Which statement is correct? (a) Net force causes motion. (b) Net force causes change in motion. Explain your answer and give an example.
4. A system can have a nonzero velocity while the net external force on it is zero. Describe such a situation.
5. An airplane has a mass of $3.1 \times 10^{4} \mathrm{~kg}$ and takes off under the influence of a constant net force of $3.7 \times 10^{4} \mathrm{~N}$. What is the net force that acts of the plane's $78-\mathrm{kg}$ pilot? (Cutnell 4.1) 93 N
6. In the amusement park ride known as Magic Mountain Superman, powerful magnets accelerate a car and its riders from rest to $45 \mathrm{~m} / \mathrm{s}$ (about 100 mph ) in a time of 7.0 s . The mass of the car and riders is $5.5 \times 10^{3} \mathrm{~kg}$. Find the average net force exerted on the car and riders by the magnets. (Cutnell 4.3) $\mathbf{3 . 5} \times \mathbf{1 0}^{\mathbf{4}} \mathbf{N}$
7. When a $58-\mathrm{g}$ tennis ball is served, it accelerates from rest to a speed of $45 \mathrm{~m} / \mathrm{s}$. The impact with the racket gives the ball a constant acceleration over a distance of 44 cm . What is the magnitude of the net force acting on the ball? (Cutnell 4.5) 130 N
8. A $1580-\mathrm{kg}$ car is traveling with a speed of $15.0 \mathrm{~m} / \mathrm{s}$. What is the magnitude of the net force that is required to bring this car to a halt in a distance of 50.0 m ? (Cutnell 4.6) $\mathbf{3 5 6 0} \mathbf{~ N}$
9. A person with a black belt in karate has a fist that has a mass of 0.70 kg . Starting from rest, this fist attains a velocity of 8.0 $\mathrm{m} / \mathrm{s}$ in 0.15 s . What is the magnitude of the average net force applied to the fist to achieve this level of performance? (Cutnell 4.7) 37 N
10. A $350-\mathrm{kg}$ sailboat has an acceleration of $0.62 \mathrm{~m} / \mathrm{s}^{2}$ at an angle of $64^{\circ}$ north of east. Find the magnitude and direction of the net force that acts on the sailboat. (Cutnell 4.12) 220 N at $64^{\circ} \mathbf{N}$ of $\mathbf{E}$
11. A force vector has a magnitude of 720 N and a direction of $38^{\circ} \mathrm{N}$ of E. Determine the magnitude and direction of the components of the force that point along the $N-S$ line and the E-W line. (Cutnell 4.10) 440N, 570N
12. Only two forces act on an object (mass $=3.00 \mathrm{~kg}$ ), as in the drawing. Find the magnitude and direction (relative to the $x$ axis) of the acceleration of the object. (Cutnell 4.13) $\mathbf{3 0 . 9} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$ at $\mathbf{2 7 . 2}{ }^{\circ}$ above $\mathbf{x}$ axis
13. What net external force is exerted on a $1100-\mathrm{kg}$ artillery shell fired from a battleship if the shell is accelerated at $2.40 \times 10^{4} \mathrm{~m} / \mathrm{s}^{2}$ ? What force is exerted on the ship by the artillery shell? (OpenStax

14. Find the net force for the following forces: 3 N East, 2 N West, 5 N North, and 4 N South. (RW) $\mathbf{1 . 4 1} \mathbf{N}$ at $\mathbf{4 5}{ }^{\circ} \mathbf{N}$ of $\mathbf{E}$
15. Find the net force for the following forces: 10 N up and 14 N at $30^{\circ}$ above the horizontal. (RW) $\mathbf{2 0 . 9} \mathbf{N}$ at $54.5^{\circ}$ above horizontal

- Force of $\qquad$ ( $F=m a$ )
- Objects near earth $\qquad$ downward at 9.80

## $\mathrm{m} / \mathrm{s}^{2}$

$$
W=m g
$$

Mass $\quad$ Name:___

- Measure of $\qquad$
- Unit: kg
- 
- Unit: N
- Depends on local $\qquad$

## Newton's Law of Universal Gravitation

Every $\qquad$ in the universe exerts a $\qquad$ on every other

$$
F_{G}=\frac{G m_{1} m_{2}}{r^{2}}
$$

where:
$G=6.673 \times 10^{-11} \frac{\mathrm{Nm}^{2}}{\mathrm{~kg}^{2}}$
$m_{1}$ and $m_{2}=$ $\qquad$ between the $\qquad$ of the objects

What is the gravitational attraction between a $75-\mathrm{kg}$ boy ( 165 lbs ) and the $50-\mathrm{kg}$ girl ( 110 lbs ) seated 1 m away in the next desk?

## Finding Acceleration Due to Gravity

Since weight is the $\qquad$ of $\qquad$

$$
\begin{gathered}
W=m g=\frac{G m m_{E}}{r_{E}^{2}} \\
g=\frac{G m_{E}}{r_{E}^{2}}
\end{gathered}
$$

## Force Problem Solving Strategy

1. Identify the $\qquad$ involved and $\qquad$ a a
2. List your $\qquad$ and $\qquad$ a $\qquad$ diagram
3. Apply
4. Check your $\qquad$ for $\qquad$

## Free-body diagram

Draw only $\qquad$ acting $\qquad$ the object
Represent the forces with vector $\qquad$

## Normal Force

- _______component force between two objects when they
- Weight pushes $\qquad$ , so the table pushes $\qquad$
- Newton's $\qquad$ Law
- Normal force doesn't always = weight
- Draw a $\qquad$ diagram to find $\qquad$

When a problem asks for apparent weight, find the $\qquad$
A lady is weighing some bananas in a grocery store when the floor collapses. If the bananas mass is 2 kg and the floor is accelerating at $-2.25 \mathrm{~m} / \mathrm{s}^{2}$, what is the apparent weight (normal force) of the bananas?

A box is sitting on a ramp angled at $20^{\circ}$. If the box weighs 50 N , what is the normal force on the box?

## Homework

1. A rock is thrown straight up. What is the net external force acting on the rock when it is at the top of its trajectory?
2. When a body is moved from sea level to the top of a mountain, what changes-the body's mass, its weight, or both?
3. Object A weighs twice as much as object B at the same spot on the earth. Would the same be true at a given spot on Mars? Explain.
4. A bowling ball (mass $=7.2 \mathrm{~kg}$, radius $=0.11 \mathrm{~m}$ ) and a billiard ball (mass $=0.38 \mathrm{~kg}$, radius $=0.028 \mathrm{~m}$ ) may each be treated as uniform spheres. What is the magnitude of the maximum gravitational force that each can exert on the other? (Cutnell 4.18) $9.6 \times 10^{-9} \mathrm{~N}$
5. On earth, two parts of a space probe weight 11000 N and 3400 N . These parts are separated by a center-to-center distance of 12 m and may be treated as uniform spherical objects. Find the magnitude of the gravitational force that each part exerts on the other out in space, far from any other objects. (Cutnell 4.19) $\mathbf{1 . 8} \times \mathbf{1 0}^{\mathbf{- 7}} \mathbf{N}$
6. A space traveler whose mass is 115 kg leaves earth. What are his weight and mass (a) on earth and (b) in interplanetary space where there are no nearby planetary objects? (Cutnell 4.21 ) $\mathbf{m = 1 1 5} \mathbf{~ k g}, \mathbf{W}=\mathbf{1 1 3 0} \mathbf{~} ; \mathbf{m}=\mathbf{1 1 5} \mathbf{~ k g}, \mathbf{W}=\mathbf{0} \mathbf{N}$
7. What is the acceleration due to gravity on the surface of the Moon? (OpenStax 6.35a) $\mathbf{1 . 6 2} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$
8. What is the acceleration due to gravity on the surface of Mars? The mass of Mars is $6.418 \times 10^{23} \mathrm{~kg}$ and its radius is $3.38 \times 10^{6}$ m. (OpenStax 6.35b) $3.75 \mathrm{~m} / \mathbf{s}^{2}$
9. (a) Calculate the acceleration due to gravity on the surface of the Sun. (b) By what factor would your weight increase if you could stand on the Sun? (Never mind that you cannot.) (OpenStax 6.36) $274 \mathrm{~m} / \mathrm{s}^{\mathbf{2}}, 28$ times
10. What is the acceleration due to gravity as an altitude of $2.0 \times 10^{6} \mathrm{~m}$ above the earth's surface? (RW) $5.68 \mathrm{~m} / \mathbf{s}^{2}$
11. A rock of mass 45 kg accidentally breaks loose from the edge of a cliff and falls straight down. The magnitude of the air resistance that opposes its downward motion is 250 N . What is the magnitude of the acceleration of the rock? (Cutnell 4.20) $4.2 \mathrm{~m} / \mathbf{s}^{2}$
12. A $35-\mathrm{kg}$ crate rests on a horizontal floor, and a $65-\mathrm{kg}$ person is standing on the crate. Determine the magnitude of the normal force that (a) the floor exerts on the crate and (b) the crate exerts on the person. (Cutnell 4.34) $980 \mathbf{N}, \mathbf{6 4 0} \mathbf{~ N}$
13. A rocket blasts off from rest and attains a speed of $45 \mathrm{~m} / \mathrm{s}$ in 15 s . An astronaut has a mass of 57 kg . What is the astronaut's apparent weight during takeoff? (Cutnell 4.35) 730 N
14. A $50-\mathrm{kg}$ woman is riding on an elevator. What is her apparent weight when it is accelerating upward at $1.5 \mathrm{~m} / \mathrm{s}^{2}$ ? (RW) 565 N
15. What is the apparent weight of a $80-\mathrm{kg}$ man riding tower drop ride that is accelerating at $8.9 \mathrm{~m} / \mathrm{s}^{2}$ downward? (RW) $\mathbf{7 2} \mathbf{~ N}$
16. A 5 -kg block rests on a frictionless plane inclined at $10^{\circ}$. What is the acceleration of the block as it slides down the incline? (RW) $1.70 \mathrm{~m} / \mathrm{s}^{2}$
17. A $0.05-\mathrm{kg}$ cookie is on a non-stick (frictionless) cookie sheet inclined at $30^{\circ}$. What is the acceleration of the cookie as it slides down the cookie sheet? If the cookie sheet is 0.75 m long, how much time to you have to catch the cookie before it falls off the edge (Note: This is a review question.)? (RW) $4.9 \mathrm{~m} / \mathbf{s}^{2}, 0.55 \mathrm{~s}$

Normal force - $\qquad$ to surface

Friction force - $\qquad$ to surface, and $\qquad$ motion

Comes from $\qquad$
Not well understood
$\qquad$ -

(a)

Cancels out $\qquad$ force until the applied force gets too $\overline{\text { of surface }}$

(b)

## Kinetic Friction

Once motion $\qquad$

$$
f_{k}=\mu_{k} F_{N}
$$

$f_{k}$ is usually $f_{s}$
A car skids to a stop after initially going $30.0 \mathrm{~m} / \mathrm{s} . \mu_{k}=0.800$. How far does the car go before stopping?

A 65-kg skier is coasting downhill on a $15^{\circ}$ slope. Assuming the coefficient of friction is that of waxed wood on snow ( $\mu_{k}=$ 0.1 ), what is the skier's acceleration?

While hauling firewood to the house, you pull a $100-\mathrm{kg}$ wood-filled wagon across level ground at a constant velocity. You pull the handle with a force of 230 N at $30^{\circ}$ above the horizontal. What is the coefficient of friction between the wagon and the ground?

1. A box rests on the floor of an elevator. Because of static friction, a force is required to start the box sliding across the floor when the elevator is (a) stationary, (b) accelerating upward, and (c) accelerating downward. Rank the forces required in these three situations from smallest to largest.
2. Define normal force. What is its relationship to friction?
3. When you learn to drive, you discover that you need to let up slightly on the brake pedal as you come to a stop or the car will stop with a jerk. Explain this in terms of the relationship between static and kinetic friction.
4. A block whose weight is 45.0 N rests on a horizontal table. A horizontal force of 36.0 N is applied to the block. The coefficients of static and kinetic friction are 0.650 and 0.420 , respectively. Will the block move under the influence of the force, and, if so, what will be the block's acceleration? (Cutnell 4.37) $\mathbf{3 . 7 2} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$
5. A $20.0-\mathrm{kg}$ sled is being pulled across a horizontal surface at a constant velocity. The pulling force has a magnitude of 80.0 N and is directed at an angle of $30.0^{\circ}$ above the horizontal. Determine the coefficient of kinetic friction. (Cutnell 4.39) $\mathbf{0 . 4 4 4}$
6. A cup of hot chocolate is sitting on the dashboard of a car that is traveling at a constant velocity. The coefficient of static friction between the cup and the dashboard is 0.30 . Suddenly, the car accelerates. What is the maximum acceleration that he car can have without the cup sliding backward off the dashboard? (RW) $2.94 \mathbf{~ m} / \mathbf{s}^{2}$
7. An $81-\mathrm{kg}$ baseball player slides into second base. The coefficient of kinetic friction between the player and the ground is 0.49 . (a) What is the magnitude of the frictional force? (b) If the player comes to rest after 1.6 s , what was his initial velocity? (Review) (RW) $\mathbf{3 8 9} \mathbf{N}, \mathbf{7 . 6 8} \mathbf{~ m} / \mathrm{s}$
8. What is the maximum frictional force ( $\mu=0.016$ ) in the knee joint of a person who supports 66.0 kg of her mass on that knee? (OpenStax 5.3) $\mathbf{1 0} \mathbf{N}$
9. Suppose you have a $120-\mathrm{kg}$ wooden crate resting on a wood floor ( $\mu_{\mathrm{s}}=0.5, \mu_{\mathrm{k}}=0.3$ ). (a) What maximum force can you exert horizontally on the crate without moving it? (b) If you continue to exert this force once the crate starts to slip, what will its acceleration then be? (OpenStax 5.4 ) $\mathbf{5 8 8} \mathbf{N}, \mathbf{1 . 9 6 ~ m / s}{ }^{\mathbf{2}}$
10. (a) If half of the weight of a small $1.00 \times 10^{3} \mathrm{~kg}$ utility truck is supported by its two drive wheels, what is the maximum acceleration it can achieve on dry concrete ( $\mu_{s}=1.0$ )? (b) Will a metal cabinet lying on the wooden bed of the truck slip if it accelerates at this rate ( $\mu_{s}=0.5$ )? (OpenStax 5.5) $4.9 \mathrm{~m} / \mathbf{s}^{2}$, No
11. Calculate the deceleration of a snow boarder going up a $5.0^{\circ}$ slope assuming the coefficient of friction for waxed wood on wet snow ( $\mu_{k}=0.1$ ). (OpenStax 5.10 ) $1.83 \mathbf{~ m} / \mathbf{s}^{2}$
12. (a) Calculate the acceleration of a skier heading down a $10.0^{\circ}$ slope, assuming the coefficient of friction for waxed wood on wet snow ( $\mu_{k}=0.1$ ). (b) Find the angle of the slope down which this skier could coast at a constant velocity. (OpenStax 5.11 ) $\mathbf{0 . 7 3 7} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}, \mathbf{5 . 7 1}{ }^{\circ}$
13. A contestant in a winter sporting event pushes a $45.0-\mathrm{kg}$ block of ice across a frozen lake as shown in the picture ( $\mu_{s}=$ $0.1, \mu_{k}=0.03$ ). (a) Calculate the minimum force F he must exert to get the block moving. (b) What is its acceleration once it starts to move, if that force is maintained? (OpenStax 5.18) $\mathbf{5 1 . 0} \mathbf{N}, \mathbf{0 . 7 2 0} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$

## Name:

## Hooke's Law

Drag
For $\qquad$ or forces that $\qquad$ (change shape)
For $\qquad$ deformations (no permanent change)

$$
F_{S}=k \Delta x
$$

$k=$ $\qquad$ and is unique to each spring
$\Delta x=$ the $\qquad$ the spring is stretched/compressed
Hooke's Law is the reason we can use a $\qquad$ scale to measure $\qquad$

## Tension

$\qquad$ force from rope, chain, etc.
$\qquad$ force from moving through a $\qquad$
Size depends on area, speed, and properties of the fluid
For $\qquad$ objects

$$
F_{D}=\frac{1}{2} C \rho A v^{2}
$$

Where
$C=\ldots$ coefficient
$\rho=$ $\qquad$ of the fluid
$A=$ $\qquad$ area of the object
$v=$ $\qquad$ of the object relative to the fluid

## Equilibrium

No $\qquad$

$$
F_{n e t}=m a \rightarrow F_{n e t}=0
$$

Find the terminal velocity of a falling mouse in air $\left(\mathrm{A}=0.004 \mathrm{~m}^{2}, \mathrm{~m}=0.02 \mathrm{~kg}, \mathrm{C}=0.5\right)$ and a human falling flat in air $\left(\mathrm{A}=0.7 \mathrm{~m}^{2}, \mathrm{~m}=85 \mathrm{~kg}, \mathrm{C}=1.0\right)$. The density of air is $1.21 \mathrm{~kg} / \mathrm{m}^{3}$.

The helicopter in the drawing is moving horizontally to the right at a constant velocity. The weight of the helicopter is $53,800 \mathrm{~N}$. The lift force L generated by the rotating blade makes an angle of $21.0^{\circ}$ with respect to the vertical.
What is the magnitude of the lift force?

A stoplight is suspended by two cables over a street. Weight of the light is 110 N and the cables make a $122^{\circ}$ angle with each side of the light Find the tension in each cable.

A 10-g toy plastic bunny is connected to its base by a spring. The spring is compressed and a suction cup on the bunny holds it to the base so that the bunny doesn't move. If the spring is compressed 3 cm and has a constant of $330 \mathrm{~N} / \mathrm{m}$, how much force must the suction cup provide?

## Homework

1. A stone is thrown from the top of a cliff. As the stone falls, is it in equilibrium?
2. During the final stages of descent, a sky diver with an open parachute approaches the ground with a constant velocity. The wind does not blow him from side to side. Is the sky diver in equilibrium, and if so, what forces are responsible for the equilibrium?
3. Why can a squirrel jump from a tree branch to the ground and run away undamaged, while a human could break a bone in such a fall?
4. A supertanker $\left(m=1.70 \times 10^{8} \mathrm{~kg}\right)$ is moving with a constant velocity. Its engines generate a forward thrust of $7.40 \times 10^{5} \mathrm{~N}$. Determine (a) the magnitude of the resistive force exerted on the tanker by the water and (b) the magnitude of the upward buoyant force exerted on the tanker by the water. (Cutnell 4.47) $\mathbf{7 . 4 0} \times \mathbf{1 0}^{\mathbf{5}} \mathbf{~}, \mathbf{1 . 6 7} \times \mathbf{1 0}^{\mathbf{9}} \mathbf{N}$
5. A stuntman is being pulled along a rough road at a constant velocity, by a cable attached to a moving truck. The cable is parallel to the ground. The mass of the stuntman is 109 kg , and the coefficient of kinetic friction between the road and him is 0.870 . Find the tension in the cable.(Cutnell 4.51) 929 N
6. (a) Calculate the tension in a vertical strand of spider web if a spider of mass $8.00 \times 10^{-5} \mathrm{~kg}$ hangs motionless on it. (b) Calculate the tension in a horizontal strand of spider web if the same spider sits motionless in the middle of it. The strand sags at an angle of $12^{\circ}$ below the horizontal. (OpenStax 4.19) $\mathbf{7 . 8 4} \times \mathbf{1 0}^{\mathbf{- 4}} \mathbf{N}, \mathbf{1 . 8 9} \times \mathbf{1 0}^{\mathbf{- 3}} \mathbf{N}$
7. Superhero and Trusty Sidekick hanging motionless from a rope. Superhero's mass is 90.0 kg , while Trusty Sidekick's is 55.0 kg , and the mass of the rope is negligible. (a) Draw a free-body diagram of the situation showing all forces acting on Superhero, Trusty Sidekick, and the rope. (b) Find the tension in the rope above Superhero. (c) Find the tension in the rope between Superhero and Trusty Sidekick. (OpenStax 4.34) $\mathbf{1 4 2 0} \mathbf{~ N}, \mathbf{5 3 9} \mathbf{~ N}$
8. Consider the $52.0-\mathrm{kg}$ mountain climber in the picture. (a) Find the tension in the rope and the force that the mountain climber must exert with her feet on the vertical rock face to remain stationary. Assume that the force is exerted parallel to her legs. Also, assume negligible force exerted by her arms. (b) What is the minimum coefficient of friction between her shoes and the cliff? (OpenStax 5.17) $\mathbf{2 7 3} \mathbf{N}, \mathbf{5 1 2} \mathbf{N} ; \mathbf{0 . 2 6 8}$
9. A monkey $(\mathrm{m}=4 \mathrm{~kg})$ is in a harness connected to a rope that goes up over a pulley on the ceiling. If the monkey pulls on the other end of the rope, it will go up. It is the climbing at a constant velocity, what is the tension in the rope? (RW) $\mathbf{1 9 . 6} \mathbf{N}$
10. A toy dart gun uses a spring to shoot a dart. (a) If you have to use 25 N to compress the spring 6 cm , what is the spring constant? (b) If it fires a $50-\mathrm{g}$ dart, what will be the acceleration of the dart assuming no air resistance? (RW) $\mathbf{4 1 7} \mathbf{~ N} / \mathbf{m}, \mathbf{5 0 0} \mathbf{~ m} / \mathrm{s}^{\mathbf{2}}$

11. An $80-\mathrm{kg}$ bungee jumper jumps off a bridge. Rubber bungee cords act as a large spring attaching the jumper to the bridge. A bear standing in the river below catches the jumper. If the spring constant of the bungees is $20 \mathrm{~N} / \mathrm{m}$ and they stretch 50 m . How much force must the bear apply to keep the jumper from moving? (RW) $\mathbf{2 1 6} \mathbf{~ N}$
12. To maintain a constant speed, the force provided by a car's engine must equal the drag force plus the force of friction of the road (the rolling resistance). (a) What are the drag forces at $100 \mathrm{~km} / \mathrm{h}$ for a Toyota Camry? (Drag area is $0.70 \mathrm{~m}^{2}$; C $=0.28$ ) (b) If the friction is 235 N , what is force the engine provides to maintain a constant velocity? (RW) $91.5 \mathrm{~N}, \mathbf{3 2 7} \mathbf{N}$
13. The terminal velocity of a person falling in air depends upon the weight and the area of the person facing the fluid. Find the terminal velocity (in meters per second) of an $80.0-\mathrm{kg}$ skydiver falling in a pike (headfirst) position with a cross-sectional area of $0.140 \mathrm{~m}^{2}$ and C $=0.70$. (OpenStax 5.20) $\mathbf{1 1 5} \mathbf{~ m} / \mathrm{s}$
14. A $560-\mathrm{g}$ squirrel with a cross-sectional area of $144 \mathrm{~cm}^{2}$ falls from a $5.0-\mathrm{m}$ tree to the ground $\mathrm{C}=1.0$. Estimate its terminal velocity. What will be the velocity of a $56-\mathrm{kg}$ person hitting the ground, assuming no drag contribution in such a short distance? (Review) (OpenStax $5.22) \mathbf{2 5 . 1} \mathbf{~ m} / \mathbf{s}, \mathbf{9 . 9 0} \mathbf{~ m} / \mathrm{s}$

## Four Basic Forces

All forces are made up of only $\qquad$ forces
-

- $\qquad$ - static electricity, magnetism
- $\qquad$ - radioactivity
- $\qquad$ - keeps nucleus of atoms together
All forces occur because $\qquad$ with that force
play $\qquad$ with a different $\qquad$
- Electromagnetic uses $\qquad$
- Scientists are trying to combine all forces together in $\qquad$
- Have combined
$\qquad$ is the weakest
We feel it because the electromagnetic $\qquad$ out over $\qquad$ areas
$\qquad$ forces are $\qquad$ but only over
$\qquad$ distance

A $1380-\mathrm{kg}$ car is moving due east with an initial speed of $27.0 \mathrm{~m} / \mathrm{s}$. After 8.00 s the car has slowed down to $17.0 \mathrm{~m} / \mathrm{s}$. Find the magnitude and direction of the net force that produces the deceleration.

A supertanker of mass $m=1.50 \times 10^{8} \mathrm{~kg}$ is being towed by two tugboats, as in the picture. The tensions in the towing cables apply the forces $T_{1}$ and $T_{2}$ at equal angles of $30.0^{\circ}$ with respect to the tanker's axis. In addition the tanker's engines produce a forward drive force D , whose magnitude is $D=75.0 \times 10^{3} \mathrm{~N}$. Moreover, the water applies an opposing force R , whose magnitude is $R=40.0 \times 10^{3} \mathrm{~N}$. The tanker moves forward with an acceleration of $2.00 \times 10^{-3} \mathrm{~m} / \mathrm{s}^{2}$. Find the magnitudes of the tensions $T_{1}$ and $T_{2}$.

A flatbed truck is carrying a crate up a $10.0^{\circ}$ hill as in the picture. The coefficient of the static friction between the truck bed and the crate is $\mu_{s}=0.350$. Find the maximum acceleration that the truck can attain before the crate begins to slip backward relative to the truck.

A window washer on a scaffold is hoisting the scaffold up the side of a building by pulling downward on a rope, as in the picture. The magnitude of the pulling force is 540 N , and the combined mass of the worker and the scaffold is 155 kg . Find the upward acceleration of the unit.

## Homework

1. A circus performer hangs stationary from a rope. She then begins to climb upward by pulling herself up, hand over hand. When she starts climbing, is the tension in the rope less than, equal to, or greater than it is when she hangs stationary? Explain.
2. Only two forces act on an object ( $\mathrm{m}=4.00 \mathrm{~kg}$ ): 60.0 N in the +y direction and 40.0 N in the +x direction. Find the magnitude and direction (relative to the $x$ axis) of the acceleration of the object. (Cutnell 4.63) $\mathbf{1 8} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$ at 56.3 ${ }^{\circ}$
3. A falling skydiver has a mass of 110 kg . What is the magnitude of the skydiver's acceleration when the upward force of air resistance (drag) has $\mathrm{C}=1.0, \mathrm{~A}=0.85 \mathrm{~m}^{2}$, and $\mathrm{v}=11 \mathrm{~m} / \mathrm{s}$ ? (RW) $9.23 \mathrm{~m} / \mathbf{s}^{2}$
4. A 292-kg motorcycle is accelerating up along a ramp that is inclined at $30.0^{\circ}$ above the horizontal. The propulsion force pushing the motorcycle up the ramp is 3150 N , and air resistance produces a force of 250 N that opposes the motion. Find the magnitude of the motorcycle's acceleration. (Cutnell 4.68) $5.03 \mathrm{~m} / \mathrm{s}^{2}$
5. A rescue helicopter is lifting a man (weight $=822 \mathrm{~N}$ ) from a capsized boat by means of a cable and harness. (a) What is the tension in the cable when the man is given an initial upward acceleration of $1.10 \mathrm{~m} / \mathrm{s}^{2}$ ? (b) What is the tension during the remainder of the rescue when he is pulled upward at a constant velocity? (Cutnell 4.70) $914 \mathbf{N}, 822 \mathbf{N}$
6. To hoist himself into a tree, a $72.0-\mathrm{kg}$ man ties one end of a nylon rope around his waist and throws the other end over a branch of the tree. He then pulls downward on the free end of the rope with a force of 358 N . Neglect any friction between the rope and the branch, and determine the man's upward acceleration. (Cutnell 4.75) $\mathbf{0 . 1 4 ~ m / s} \mathbf{s}^{\mathbf{2}}$
7. A $95.0-\mathrm{kg}$ person stands on a scale in an elevator. What is the apparent weight when the elevator is (a) accelerating upward with an acceleration of $1.80 \mathrm{~m} / \mathrm{s}^{2}$, (b) moving upward at a constant speed, and (c) accelerating downward with an acceleration of $1.30 \mathrm{~m} / \mathrm{s}^{2}$ ? (Cutnell 4.94) $\mathbf{1 1 0 0} \mathrm{N}, \mathbf{9 3 1} \mathrm{N}, \mathbf{8 0 8} \mathbf{N}$
8. A 15-g bullet is fired from a rifle. It takes $2.50 \times 10^{-3} \mathrm{~s}$ for the bullet to travel the length of the barrel, and it exits the barrel with a speed of $715 \mathrm{~m} / \mathrm{s}$. Assuming that the acceleration of the bullet is constant, find the average net force exerted on the bullet. (Finding the acceleration is review.) (Cutnell 4.95) 4290 N
9. Suppose a $60.0-\mathrm{kg}$ gymnast climbs a rope. (a) What is the tension in the rope if he climbs at a constant speed? (b) What is the tension in the rope if he accelerates upward at a rate of $1.50 \mathrm{~m} / \mathrm{s}^{2}$ ? (OpenStax 4.20 ) $588 \mathbf{N}, 678 \mathbf{N}$
10. A $5.00 \times 10^{5}-\mathrm{kg}$ rocket is accelerating straight up. Its engines produce $1.250 \times 10^{7} \mathrm{~N}$ of thrust, and air resistance is $4.50 \times 10^{6} \mathrm{~N}$. What is the rocket's acceleration? (OpenStax 4.23) $\mathbf{6 . 2 0} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$
11. The wheels of a midsize car exert a force of 2100 N backward on the road to accelerate the car in the forward direction. If the force of friction including air resistance is 250 N and the acceleration of the car is $1.80 \mathrm{~m} / \mathrm{s}^{2}$, what is the mass of the car plus its occupants? (OpenStax 4.24) $1030 \mathbf{~ k g}$
12. Calculate the force a $70.0-\mathrm{kg}$ high jumper must exert on the ground to produce an upward acceleration 4.00 times the acceleration due to gravity. (OpenStax 4.25) $\mathbf{3 4 3 0} \mathbf{~ N}$
13. A nurse pushes a cart by exerting a force on the handle at a downward angle $35.0^{\circ}$ below the horizontal. The loaded cart has a mass of 28.0 kg , and the force of friction is 60.0 N . (a) Draw a free-body diagram for the system of interest. (b) What force must the nurse exert to move at a constant velocity? (OpenStax 4.35) $73 \mathbf{N}$

Motion in $\qquad$ with constant $\qquad$

## Rotation Angle ( $\Delta \theta$ )

$\qquad$ through which an object $\qquad$
Arc Length ( $\Delta \mathrm{s}$ )

- ___ around part of a _

$$
\Delta \theta=\frac{\Delta s}{r}
$$

## Angle Units

- 1 Circle $=1$ revolution
- 1 Circle $=360^{\circ}$
- 1 Circle $=2 \pi$ radians

Arc length must be in $\qquad$
Convert $60^{\circ}$ to radians

## Convert 2 revolutions to radians

## Angular Velocity ( $\omega$ )

How fast an object $\qquad$
$\omega=\frac{\Delta \theta}{\Delta t}$
Unit: rad/s CCW $\qquad$ CW $\qquad$
$v=r \omega$
A CD rotates 320 times in 2.4 s . What is its angular velocity in rad/s? What is the linear velocity of a point 5 cm from the center?

## Centripetal Acceleration

$$
a_{c}=\frac{v^{2}}{r}=r \omega^{2}
$$

At any given moment
$v$ is pointing $\qquad$ to the circle
$a_{c}$ is pointing towards the $\qquad$ of the circle
If the object suddenly broke from circular motion would travel in $\qquad$ to circle
Two identical cars are going around two corners at $30 \mathrm{~m} / \mathrm{s}$. Each car can handle up to 1 g . The radius of the first curve is 50 m and the radius of the second is 100 m . Do either of the cars make the curve? (Hint: find the $a_{c}$ )

## Homework

1. The speedometer of your car shows you are traveling at a constant speed of $35 \mathrm{~m} / \mathrm{s}$. Is it possible that your car is accelerating? If so, explain how this could happen.
2. The equations of kinematics describe the motion of an object that has a constant acceleration. These equations cannot be applied to uniform circular motion. Why not?
3. Is it possible for an object to have an acceleration when the velocity of the object is constant? When the speed of the object is constant? In each case, give your reasoning.
4. There is an analogy between rotational and linear physical quantities. What rotational quantities are analogous to distance and velocity?
5. Can centripetal acceleration change the speed of circular motion? Explain.
6. Microwave ovens rotate at a rate of about $6 \mathrm{rev} / \mathrm{min}$. What is this in revolutions per second? What is the angular velocity in radians per second? (OpenStax 6.2) $0.1 \mathrm{rev} / \mathrm{s}, 0.63 \mathrm{rad} / \mathrm{s}$
7. (a) What is the period of rotation of Earth in seconds? (b) What is the angular velocity of Earth? (c) Given that Earth has a radius of $6.4 \times 10^{6} \mathrm{~m}$ at its equator, what is the linear velocity at Earth's surface? (OpenStax 6.4) 86400 s, 7.3 $\times 10^{-5} \mathbf{r a d} / \mathbf{s}, \mathbf{4 7 0} \mathbf{~ m} / \mathrm{s}$
8. A baseball pitcher brings his arm forward during a pitch, rotating the forearm about the elbow. If the velocity of the ball in the pitcher's hand is $35.0 \mathrm{~m} / \mathrm{s}$ and the ball is 0.300 m from the elbow joint, what is the angular velocity of the forearm? (OpenStax 6.5) $\mathbf{1 1 7} \mathbf{~ r a d} / \mathrm{s}$
9. In lacrosse, a ball is thrown from a net on the end of a stick by rotating the stick and forearm about the elbow. If the angular velocity of the ball about the elbow joint is $30.0 \mathrm{rad} / \mathrm{s}$ and the ball is 1.30 m from the elbow joint, what is the velocity of the ball? (OpenStax 6.6) $\mathbf{3 9 . 0} \mathbf{~ m} / \mathrm{s}$
10. A car travels at a constant speed around a circular track whose radius is 2.6 km . The car goes once around the track in 360 s . What is the magnitude of the centripetal acceleration of the car? (Cutnell 5.2) $\mathbf{0 . 7 9 \mathbf { m } / \mathbf { s } ^ { \mathbf { 2 } }}$
11. Computer-controlled display screens provide drivers in the Indianapolis 500 with a variety of information about how their cars are performing. For instance, as a car is going through a turn, a speed of $221 \mathrm{mi} / \mathrm{h}(98.8 \mathrm{~m} / \mathrm{s})$ and a centripetal acceleration of 3.00 g (three times the acceleration due to gravity) are displayed. Determine the radius of the turn (in meters). (Cutnell 5.5) 332 m
12. There is a clever kitchen gadget for drying lettuce leaves after you wash them. It consists of a cylindrical container mounted so that it can be rotated about its axis by turning a hand crank. The outer wall of the cylinder is perforated with small holes. You put the wet leaves in the container and turn the crank to spin off the water. The radius of the container is 12 cm . When the cylinder is rotating at $2.0 \mathrm{rev} / \mathrm{s}$, what is the magnitude of the centripetal acceleration at the outer wall. (Cutnell 5.6 ) $\mathbf{1 9 ~ m} / \mathbf{s}^{2}$
13. Each of the space shuttle's main engines is fed liquid hydrogen by a high-pressure pump. Turbine blades inside the pump rotate at $617 \mathrm{rev} / \mathrm{s}$. A point on one of the blades traces out a circle with a radius of 0.020 m as the blade rotates. (a) What is the magnitude of the centripetal acceleration that the blade must sustain at this point? (b) Express this acceleration as a multiple of g. (Cutnell 5.8) $\mathbf{3 . 0} \times \mathbf{1 0}^{\mathbf{5}} \mathbf{~ m} / \mathrm{s}^{\mathbf{2}}, \mathbf{3 . 1} \times \mathbf{1 0}^{\mathbf{4}} \mathrm{g}$
14. A fairground ride spins its occupants inside a flying saucer-shaped container. If the horizontal circular path the riders follow has an 8.00 m radius, at how many revolutions per minute will the riders be subjected to a centripetal acceleration 1.50 times that due to gravity? (OpenStax 6.10) $12.9 \mathrm{rev} / \mathrm{min}$
15. The propeller of a World War II fighter plane is 2.30 m in diameter. (a) What is its angular velocity in radians per second if it spins at $1200 \mathrm{rev} / \mathrm{min}$ ? (b) What is the linear speed of its tip at this angular velocity if the plane is stationary on the tarmac? (c) What is the centripetal acceleration of the propeller tip under these conditions? Calculate it in meters per second squared and convert to multiples of g. (OpenStax 6.13) $\mathbf{1 2 6} \mathbf{~ r a d} / \mathrm{s}, \mathbf{1 4 5} \mathbf{~ m} / \mathrm{s}, \mathbf{1 . 8 2} \times \mathbf{1 0}^{\mathbf{4}} \mathbf{~ m} / \mathrm{s}, \mathbf{1 . 8 5} \times \mathbf{1 0}^{\mathbf{3}} \mathbf{g}$
16. Olympic ice skaters are able to spin at about $5 \mathrm{rev} / \mathrm{s}$. (a) What is their angular velocity in radians per second? (b) What is the centripetal acceleration of the skater's nose if it is 0.120 m from the axis of rotation? (c) An exceptional skater named Dick Button was able to spin much faster in the 1950s than anyone since-at about $9 \mathrm{rev} / \mathrm{s}$. What was the centripetal acceleration of the tip of his nose, assuming it is at 0.120 m radius? (d) Comment on the magnitudes of the accelerations found. It is reputed that Button ruptured small blood vessels during his spins. (OpenStax 6.16) $\mathbf{3 1 . 4} \mathbf{r a d} / \mathbf{s}, \mathbf{1 1 8} \mathbf{~ m} / \mathbf{s}^{2}, \mathbf{3 8 4} \mathbf{~ m} / \mathbf{s}^{\mathbf{2}}$
17. A rotating space station is said to create "artificial gravity"-a loosely-defined term used for an acceleration that would be crudely similar to gravity. The outer wall of the rotating space station would become a floor for the astronauts, and centripetal acceleration supplied by the floor would allow astronauts to exercise and maintain muscle and bone strength more naturally than in non-rotating space environments. If the space station is 200 m in diameter, what angular velocity would produce an "artificial gravity" of $9.80 \mathrm{~m} / \mathrm{s}^{2}$ at the rim? (OpenStax 6.19) $\mathbf{0 . 3 1 3} \mathbf{r a d} / \mathrm{s}$

Newton's Second Law

$$
\begin{gathered}
F=m a \\
F_{C}=\frac{m v^{2}}{r}=m r \omega^{2}
\end{gathered}
$$

Some other $\qquad$ creates $\qquad$ force

- Swinging something from a string $\rightarrow$ $\qquad$
- Satellite in orbit $\rightarrow$ $\qquad$
- Car going around curve $\rightarrow$ $\qquad$
A $1.25-\mathrm{kg}$ toy airplane is attached to a string and swung in a circle with radius $=0.50 \mathrm{~m}$. What was the centripetal force for a speed of $20 \mathrm{~m} / \mathrm{s}$ ? What provides the Fc ?

What affects Fc more: a change in mass, a change in radius, or a change in speed?

## Banked Curves

When a car travels around an $\qquad$ curve,
$\qquad$ provides the centripetal force.
By banking a curve, this reliance on friction can be
$\qquad$ for a given speed.
The $\qquad$ force will provide the centripetal force.

$$
\tan (\theta)=\frac{v^{2}}{r g}
$$

(a)

(b)

In the Daytona International Speedway, the corner is banked at $31^{\circ}$ and $r=316 \mathrm{~m}$. What is the speed that this corner was designed for?

Cars go 195 mph around the curve. How?

Why do objects seem to fly away from circular motion?

How does the spin cycle in a washing machine work?

1. A bug lands on a windshield wiper. Explain why the bug is more likely to be dislodged when the wipers are turned on at the high rather than the low setting.
2. A penny is placed on a rotating turntable. Where on the turntable does the penny require the largest centripetal force to remain in place? Explain.
3. Define centripetal force. Can any type of force (for example, tension, gravitational force, friction, and so on) be a centripetal force? Can any combination of forces be a centripetal force?
4. If centripetal force is directed toward the center, why do you feel that you are 'thrown' away from the center as a car goes around a curve? Explain.
5. Do you feel yourself thrown to either side when you negotiate a curve that is ideally banked for your car's speed? What is the direction of the force exerted on you by the car seat?
6. A $0.015-\mathrm{kg}$ ball is shot from the plunger of a pinball machine. Because of a centripetal force of 0.028 N , the ball follows a circular arc whose radius is 0.25 m . What is the speed of the ball? (Cutnell 5.11 ) $\mathbf{0 . 6 8} \mathbf{~ m} / \mathbf{s}$
7. In a skating stunt known as "crack-the-whip," a number of skaters hold hands and form a straight line. They try to skate so that the line rotates about the skater at one end, who acts as the pivot. The skater farthest out has a mass of 80.0 kg and is 6.10 m from the pivot. He is skating at a speed of $6.80 \mathrm{~m} / \mathrm{s}$. Determine the magnitude of the centripetal force that acts on him. (Cutnell 5.12) 606 N
8. At an amusement park there is a ride in which cylindrically shaped chambers spin around a central axis. People sit in seats facing the axis, their backs against the outer wall. At one instant the outer wall moves at a speed of $3.2 \mathrm{~m} / \mathrm{s}$, and an $83-\mathrm{kg}$ person feels a $560-\mathrm{N}$ force pressing against his back. what is the radius of a chamber? (Cutnell 5.14 ) $1.5 \mathbf{~ m}$
9. (a) A 22.0 kg child is riding a playground merry-go-round that is rotating at $40.0 \mathrm{rev} / \mathrm{min}$. What centripetal force must she exert to stay on if she is 1.25 m from its center? (b) What centripetal force does she need to stay on an amusement park merry-go-round that rotates at $3.00 \mathrm{rev} / \mathrm{min}$ if she is 8.00 m from its center? (OpenStax 6.23) $\mathbf{4 8 3} \mathbf{N} \mathbf{1 7 . 4} \mathbf{N}$
10. Calculate the centripetal force on the end of a 100 m (radius) wind turbine blade that is rotating at $0.5 \mathrm{rev} / \mathrm{s}$. Assume the mass is 4 kg. (OpenStax 6.24) $\mathbf{4} \times \mathbf{1 0}^{\mathbf{3}} \mathbf{N}$
11. What is the ideal banking angle for a gentle turn of 1.20 km radius on a highway with a $105 \mathrm{~km} / \mathrm{h}$ speed limit (about 65 $\mathrm{mi} / \mathrm{h}$ ), assuming everyone travels at the limit? (OpenStax 6.25) 4.14 ${ }^{\circ}$
12. What is the ideal speed to take a 100 m radius curve banked at a $20.0^{\circ}$ angle? (OpenStax 6.26) $\mathbf{1 8 . 9} \mathbf{~ m} / \mathbf{s}$
13. (a) What is the radius of a bobsled turn banked at $75.0^{\circ}$ and taken at $30.0 \mathrm{~m} / \mathrm{s}$, assuming it is ideally banked? (b) Calculate the centripetal acceleration. (c) Does this acceleration seem large to you? (OpenStax 6.27) $24.6 \mathbf{m}, \mathbf{3 6 . 6} \mathbf{~ m} / \mathbf{s}^{2}, \mathbf{3 . 7 3} \mathbf{g}$
14. At what angle should a curve of radius 150 m be banked, so cars can travel safely at $25 \mathrm{~m} / \mathrm{s}$ without relying on friction? (Cutnell 5.20) 23 ${ }^{\circ}$
15. On a banked race track, the smallest circular path on which cars can move has a radius of 112 m , while the largest has a radius of 165 m , as the drawing illustrates. The height of the outer wall is 18 m . Find the (a) the smallest and (b) the largest speed at which cars can move on this track without relying on friction. (Cutnell 5.22) $\mathbf{1 9} \mathbf{~ m / s , 2 3 ~ m / s}$

- Any object $\qquad$ another object only under the influence of $\qquad$
- Gravity provides the $\qquad$ force
There is only $\qquad$ speed that a satellite can have if the satellite is to remain in an orbit with a $\qquad$ radius.

$$
v=\sqrt{\frac{G M}{r}}
$$

- $r$ is measured from $\qquad$ of the Earth
- As r $\qquad$ , v $\qquad$
of the satellite is not in equation
Calculate the speed of a satellite 500 km above the earth's surface.

Find the mass of a black hole where the matter orbiting it at $\mathrm{r}=2.0 \times 10^{20} \mathrm{~m}$ move at speed of $7,520,000 \mathrm{~m} / \mathrm{s}$.

Since satellites are moving only under the influence of $\qquad$ , and the acceleration points towards $\qquad$ satellites are in $\qquad$ -.

## Kepler's Laws of Planetary Motion

After studying motion of planets, $\qquad$ came up with his laws of planetary motion
$\qquad$ then proved them all using his Universal Law of Gravitation
Assumptions:

- A $\qquad$ mass, $m$, orbits much $\qquad$ mass, $M$, so we can use $M$ as an approximate inertia reference frame
- The system is $\qquad$

1. The $\qquad$ of each planet about the Sun is an $\qquad$ with the sun at one
$\qquad$ .
2. Each $\qquad$ moves so that an $\qquad$ line drawn from the $\qquad$ to
the $\qquad$ sweeps out equal $\qquad$ in equal $\qquad$ -.
3. The $\qquad$ of the $\qquad$ of the $\qquad$ of any two planets about the sun is equal to their $\qquad$ of the $\qquad$ of their average $\qquad$ from the sun.

Use the data of Mars to find the mass of the sun assuming a circular orbit. ( $r=2.279 \times 10^{8} \mathrm{~km}, T=1.881 \mathrm{yr}$ )

## Homework

1. Draw a free body diagram for a satellite in an elliptical orbit showing why its speed increases as it approaches its parent body and decreases as it moves away.
2. Are Kepler's laws purely descriptive, or do they contain causal information?
3. A satellite is in a circular orbit around an unknown planet. The satellite has a speed of $1.70 \times 10^{4} \mathrm{~m} / \mathrm{s}$, and the radius of the orbit is $5.25 \times 10^{6} \mathrm{~m}$. A second satellite also has a circular orbit around this same planet. The orbit of this second satellite has a radius of $8.60 \times 10^{6} \mathrm{~m}$. What is the speed of the second satellite? (Cutnell 5.27 ) $\mathbf{1 . 3 3 \times 1 \mathbf { 1 0 } ^ { 4 }} \mathbf{~ m} / \mathbf{s}$
4. A satellite is placed in orbit $6.00 \times 10^{5} \mathrm{~m}$ above the surface of Jupiter. Jupiter has a mass of $1.90 \times 10^{27} \mathrm{~kg}$ and a radius of $7.14 \times 10^{7} \mathrm{~m}$. Find the orbital speed of the satellite. (Cutnell 5.29) $\mathbf{4 . 2 0 \times 1 \mathbf { 1 0 } ^ { 4 } \mathbf { ~ m } / \mathrm { s }}$
5. The moon orbits the earth at a distance of $3.85 \times 10^{8} \mathrm{~m}$. Assume that this distance is between the centers of the earth and the moon and that the mass of the earth is $5.98 \times 10^{24} \mathrm{~kg}$. Find the period for the moon's motion around the earth. Express the answer in days and compare it to the length of a month. (Cutnell 5.30) $\mathbf{2 7 . 5}$ days
6. A geosynchronous Earth satellite is one that has an orbital period of precisely 1 day. Such orbits are useful for communication and weather observation because the satellite remains above the same point on Earth (provided it orbits in the equatorial plane in the same direction as Earth's rotation). Calculate the radius of such an orbit based on the data for the moon in Table 6.2. (OpenStax 6.43) $\mathbf{4 . 2 3 \times 1 \mathbf { 1 0 } ^ { \mathbf { 4 } } \mathbf { ~ k m }}$
7. Calculate the mass of the Sun based on data for Earth's orbit and compare the value obtained with the Sun's actual mass. (OpenStax 6.44) $\mathbf{1 . 9 8} \times \mathbf{1 0}^{\mathbf{3 0}} \mathbf{~} \mathbf{~ g}$
8. Find the mass of Jupiter based on data for the orbit of one of its moons, and compare your result with its actual mass. (OpenStax 6.45) $\mathbf{1 . 8 9 \times 1 \mathbf { 1 0 } ^ { \mathbf { 2 7 } } \mathbf { ~ k g } , ~}$
9. Astronomical observations of our Milky Way galaxy indicate that it has a mass of about $8.0 \times 10^{11}$ solar masses. A star orbiting on the galaxy's periphery is about $6.0 \times 10^{4}$ light years from its center. (a) What should the orbital period of that star be? (b) If its period is $6.0 \times 10^{7}$ years instead, what is the mass of the galaxy? Such calculations are used to imply the existence of "dark matter" in the universe and have indicated, for example, the existence of very massive black holes at the centers of some galaxies. (OpenStax 6.47) $\mathbf{3} \times \mathbf{1 0}^{\mathbf{8}}$ years, $\mathbf{2} \times \mathbf{1 0}^{\mathbf{1 3}}$ solar masses

## Physics

## Unit 2: Forces and Uniform Circular Motion

1. Terms like Velocity, Force, Acceleration, Equilibrium, Inertia, apparent weight, Normal force, True Weight, Gravitational Force, Applied force, Tension, Uniform Circular Motion, Period, Revolution, radius, centripetal acceleration, centripetal force, banked and unbanked curves, satellites, orbit, weightlessness, artificial gravity, Kepler's Laws of Planetary Motion
2. Fundamental forces
3. Difference between $g$ and $G$
4. static and kinetic frictional forces
5. List Newton's Three Laws of Motion.
6. difference between mass and weight
7. What forces do you draw on a freebody diagram?
8. How is centripetal force different from all the other forces we have studied?
9. A $100-\mathrm{N}$ force acts on a $75-\mathrm{kg}$ person. What is the acceleration of the person?
10. A $70-\mathrm{kg}$ ice skater pushes on a box on smooth ice (no friction). He applies 200 N horizontally against the $50-\mathrm{kg}$ box. What are the accelerations of the ice skater and the box?
11. A $10-\mathrm{kg}$ block rests on a frictionless plane inclined at $60^{\circ}$. What is the acceleration of the block as it slides down the incline?
12. A stoplight is suspended by two cables over a street. Weight of the light is 110 N and the cables make a $116^{\circ}$ angle with each other. Find the tension in each cable.
13. A $100-\mathrm{kg}$ man is standing on a bathroom scale while riding an elevator. What does the scale read when the elevator is accelerating upward at $5 \mathrm{~m} / \mathrm{s}^{2}$ ?
14. A 5000-kg car skids to a stop. $\mu_{k}=.5$. What is the magnitude of the friction force?
15. Find the terminal velocity of a falling mouse in air ( $A=0.004 \mathrm{~m}^{2}, m=0.02 \mathrm{~kg}, C=0.5$ ).
16. Convert the angular measure of 40 degrees to radians.
17. A stone is in a sling and a boy whirls it around in a circle. If the centripetal acceleration is $50 \mathrm{~m} / \mathrm{s}^{2}$ and the radius of the circle is 10 cm , what is the speed of the stone?
18. Find the gravitational force of attraction between a $100-\mathrm{kg}$ girl and a $200-\mathrm{kg}$ boy sitting 0.5 meters apart.
19. What is the acceleration due to gravity at an altitude of $1 \times 10^{6} \mathrm{~m}$ above the earth's surface? Note: the radius of the earth is $6.36 \times 10^{6} \mathrm{~m}$.
20. Four people are having a tug-o-war game. Ashley pulls left with 20 N, Bert pulls left with 10 N, Charlie pulls right with 30 N , and Dannie pulls right with 5 N . What is the magnitude of the acceleration of the 5 kg rope and who wins the game?
21. A 10-g nut is hanging from a spring that has stretched 30 cm because a squirrel is pulling it down. If the squirrel is pulling with 300 N , what is the spring constant?
22. Only forces acting on the object
23. $F=m a$
$100 \mathrm{~N}=75 \mathrm{~kg}(\mathrm{a})$
$a=1.33 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}$
24. 

$$
W_{\text {skater }}=70 \mathrm{~kg}\left(9.8 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}\right)
$$

14. $F_{y}: F_{N}-W=0 \rightarrow F_{N}=W \rightarrow F_{N}=$ $(5000 \mathrm{~kg})\left(9.8 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}\right)=49000 \mathrm{~N}$
$F_{x}: f_{k}=\mu_{k} F_{N}=0.5(49000 N)=24500 \mathrm{~N}$
15. Mouse: $v=\sqrt{\frac{2 m g}{\rho C A}}$
$v=\sqrt{\frac{2(0.02 \mathrm{~kg})\left(9.8 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}\right)}{\left(1.2 \frac{\mathrm{~kg}}{\mathrm{~m}^{3}}\right)(0.5)\left(0.004 \mathrm{~m}^{2}\right)}}=12.7 \frac{\mathrm{~m}}{\mathrm{~s}}$
16. $40^{\circ}\left(\frac{\pi}{180^{\circ}}\right)=\frac{2 \pi}{9}$

$$
=686 \mathrm{~N}
$$

| $=686 \mathrm{~N}$ |  | $=490 \mathrm{~N}$ |  |
| :---: | :---: | :---: | :---: |
| $x$ | $y$ | $x$ | $y$ |
| -200 N | $W=\begin{gathered} F_{N} \\ -686 N \end{gathered}$ | 200 N | $W=\begin{gathered} F_{N} \\ -490 N \end{gathered}$ |
| $F=m a$ |  | $F=m a$ |  |
| $-200 \mathrm{~N}=70 \mathrm{~kg}(\mathrm{a})$ |  | $200 \mathrm{~N}=50 \mathrm{~kg}(\mathrm{a})$ |  |
