## **Exponential function**

$$y = a \cdot b^x$$

- *a* is \_\_\_\_\_ amount (*y*-int)
- *b* is \_\_\_\_\_
- x is \_\_\_\_\_
- If b > 1
  - Exponential
- If 0 < b < 1
  - Exponential
    - \_\_\_\_
- Domain: \_\_\_\_\_
- Range: \_\_\_\_\_
- Horizontal Asymptote: \_\_\_\_\_\_
- *y*-intercept: \_\_\_\_\_

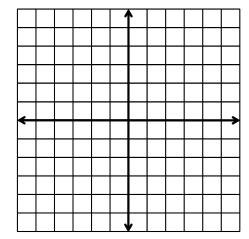

# Transformations

$$y = a \cdot b^{x-h} + k$$

- *a* \_\_\_\_\_ stretch
  - o If *a* is negative, then \_\_\_\_\_ over *x*-axis
- h moves \_\_\_\_\_
- k moves \_\_\_\_\_
- Domain: \_\_\_\_\_
- Range:
  - $\circ \qquad \qquad \text{if } a > 0$
  - o \_\_\_\_\_ if a < 0
- Horizontal Asymptote: \_\_\_\_\_\_
- *y*-int: \_\_\_\_\_ if h = 0

Graph by making a table

Graph 
$$y = 4^{-x} + 3$$

Exponential functions are \_\_\_\_\_

Each x gives a \_\_\_\_\_y

Solve  $16 = 2^{x+2}$ 

Solve  $\left(\frac{1}{3}\right)^x = 81$ 

#### **Natural Base**

- $e = \left(1 + \frac{1}{n}\right)^n$  when  $n \to \infty$
- e≈\_\_\_\_\_...

### **Compound Interest**

$$A = P\left(1 + \frac{r}{n}\right)^{nt}$$

A = current amount

P = principle (initial amount)

r = yearly interest rate (APR)

n = number of compoundings per year

t = years

**Compounded Continuously** 

 $A = Pe^{rt}$
